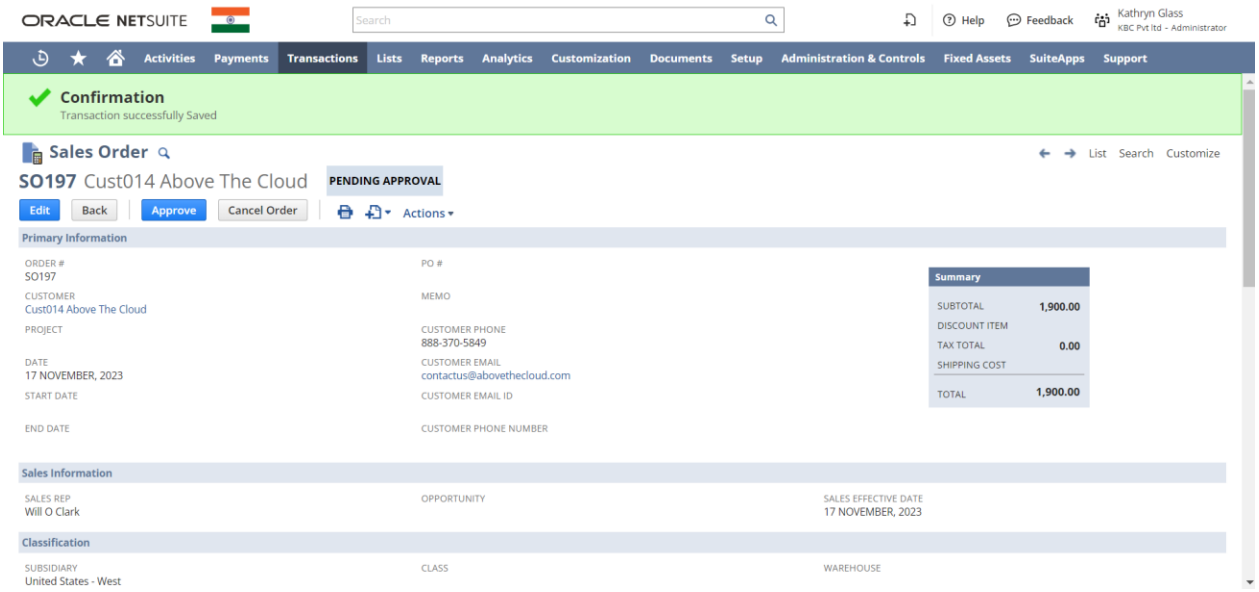
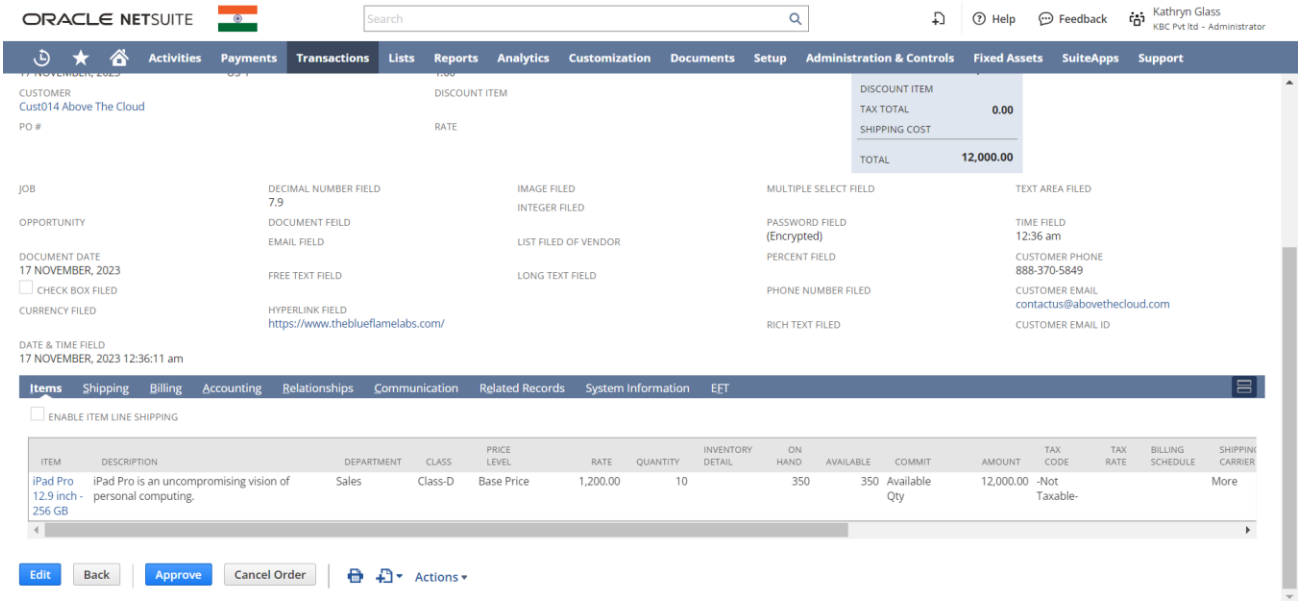
ADDITIONAL ASSIGNMENT QUESTION

1. Implement the order to cash process. Once the invoice is generated send an email to the customer fictionally.

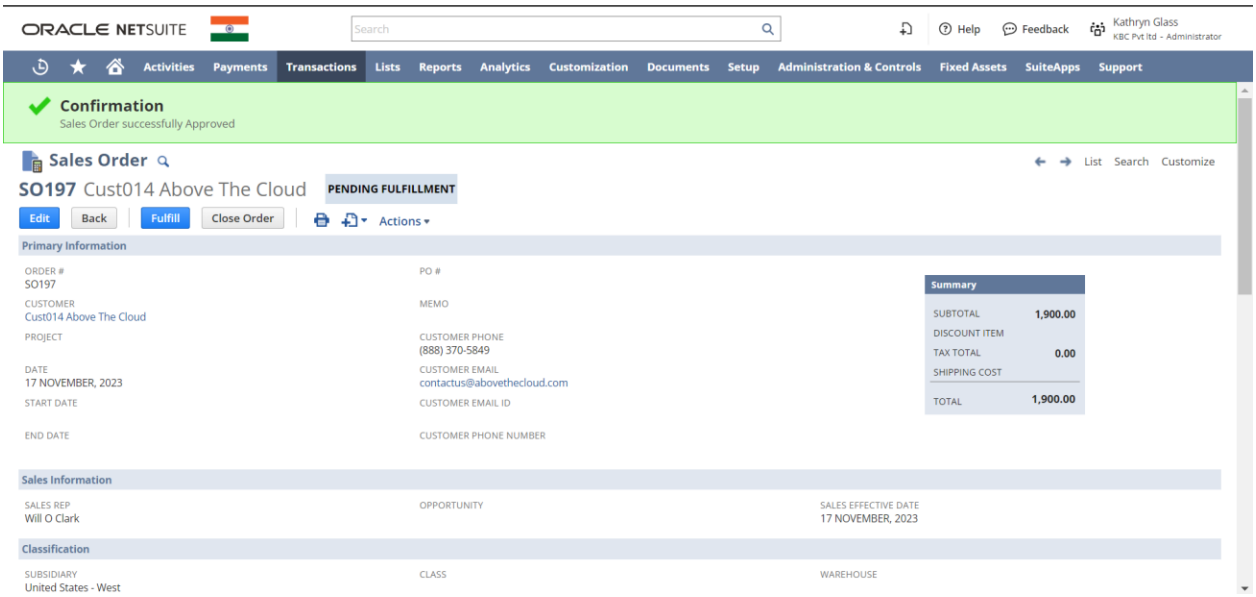
Ans.

Step 1: Create a sales order in NetSuite when a customer places a purchase order. This sales order contains information about the products or services the customer is purchasing.

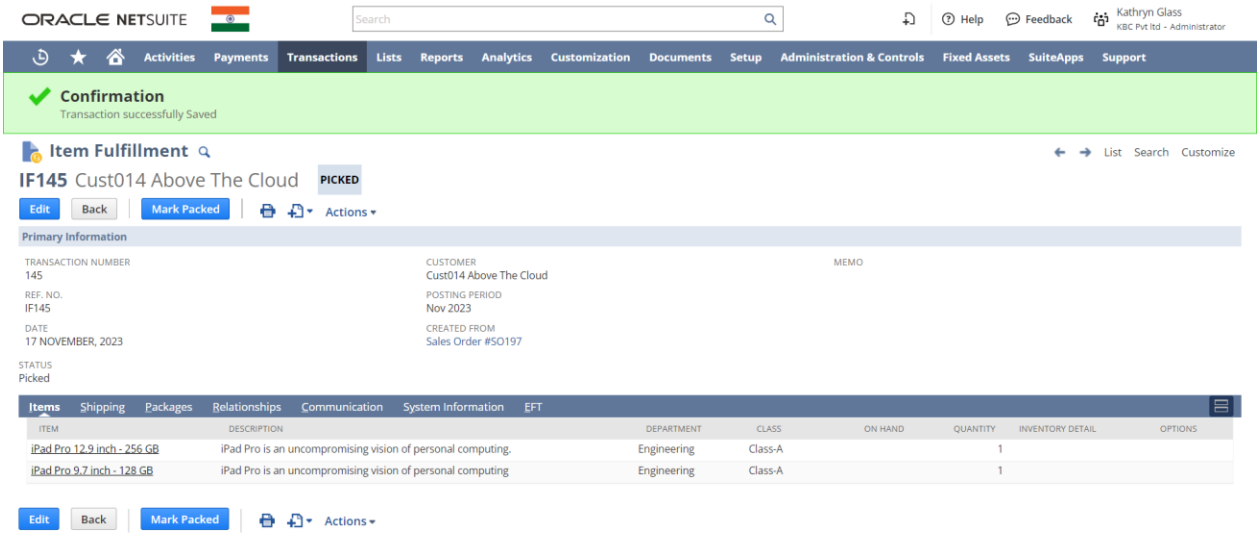


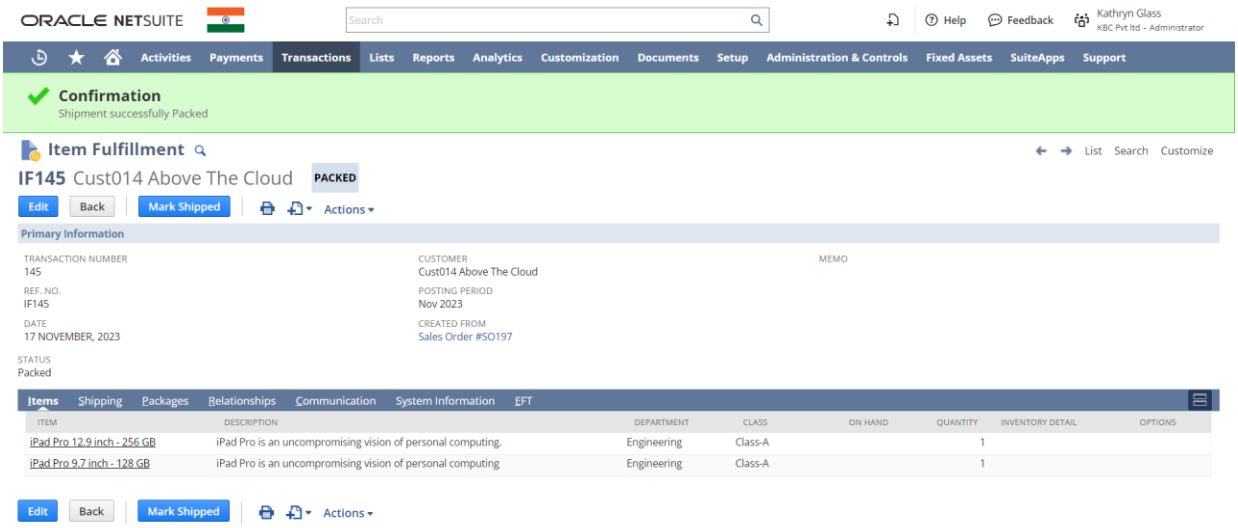


Step 2: Approve the sales order and send an order fulfillment to the customer to acknowledge their order and provide details such as expected delivery dates and pricing.

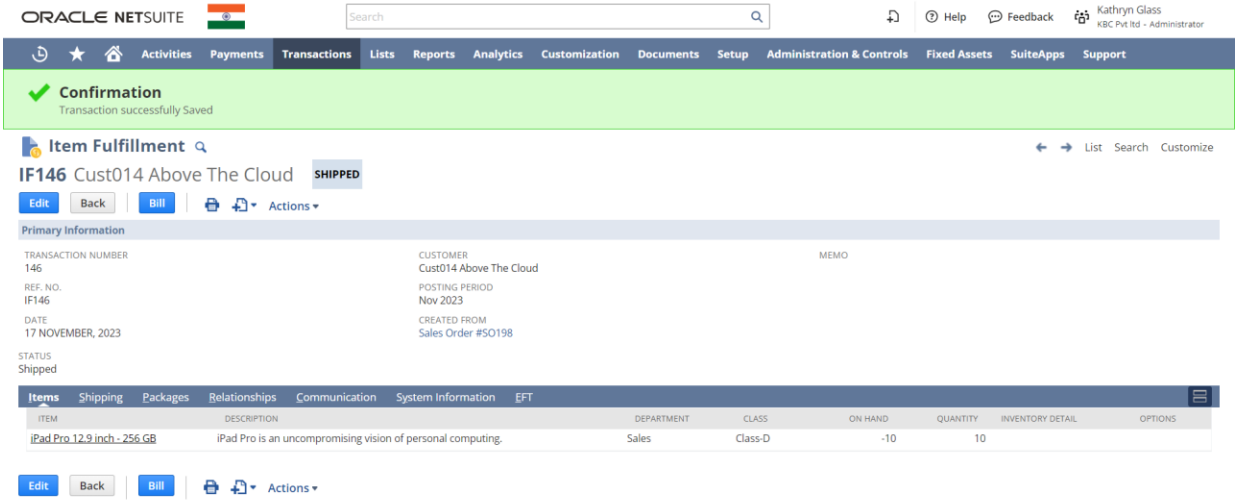


Step 3: Prepare the items from your inventory for shipment based on the sales order. This may involve picking items from the warehouse and packing them for shipping.

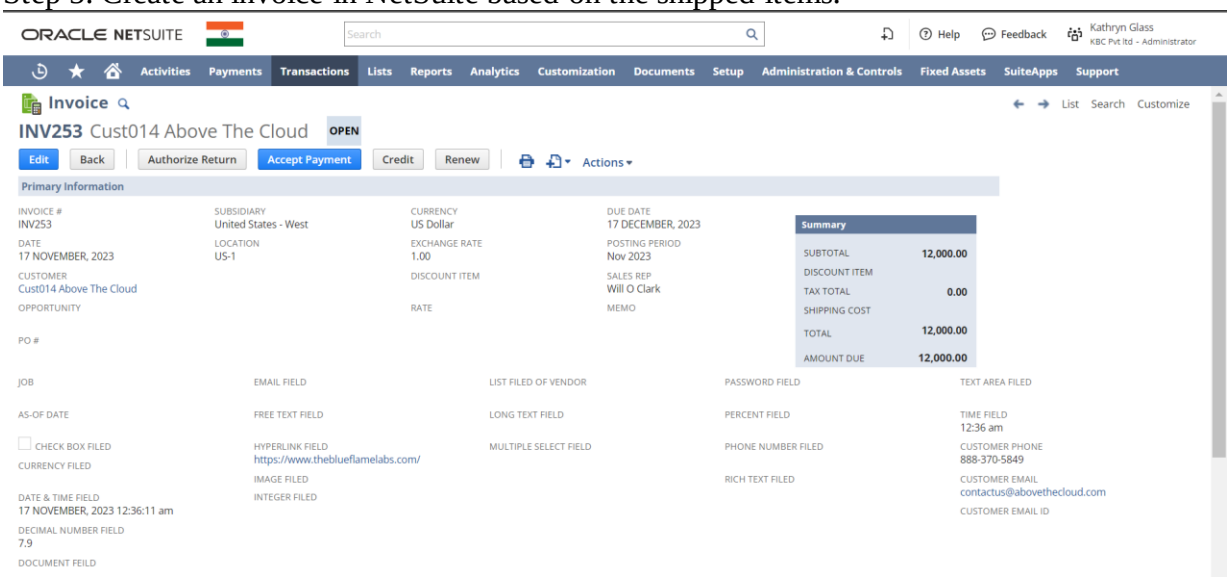


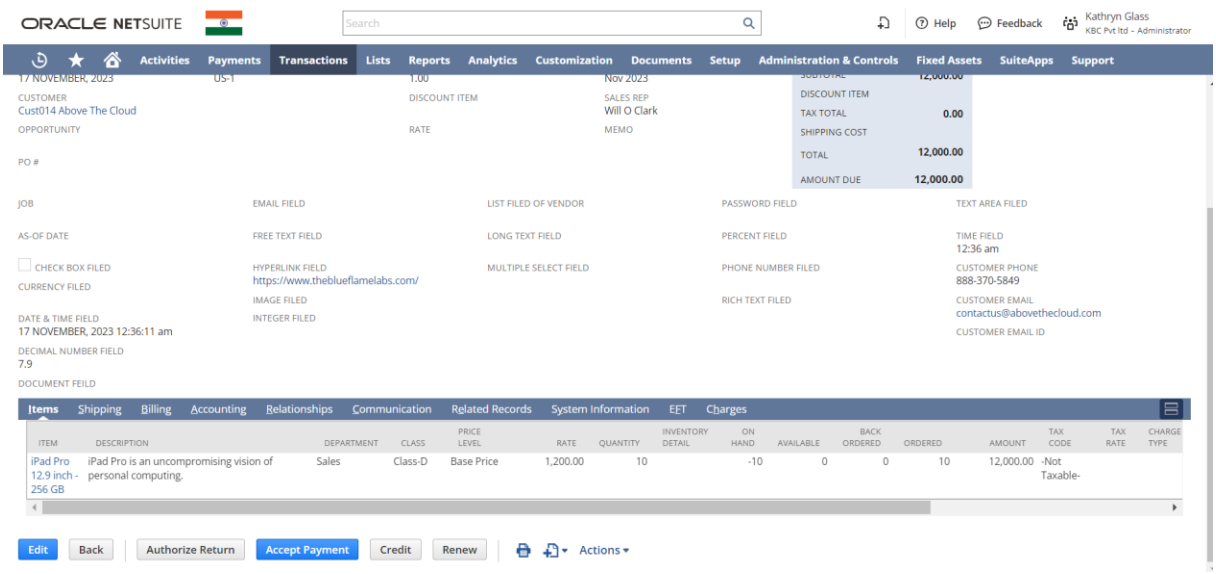


Step 4: Generate shipping labels and documentation, and then ship the items to the customer.

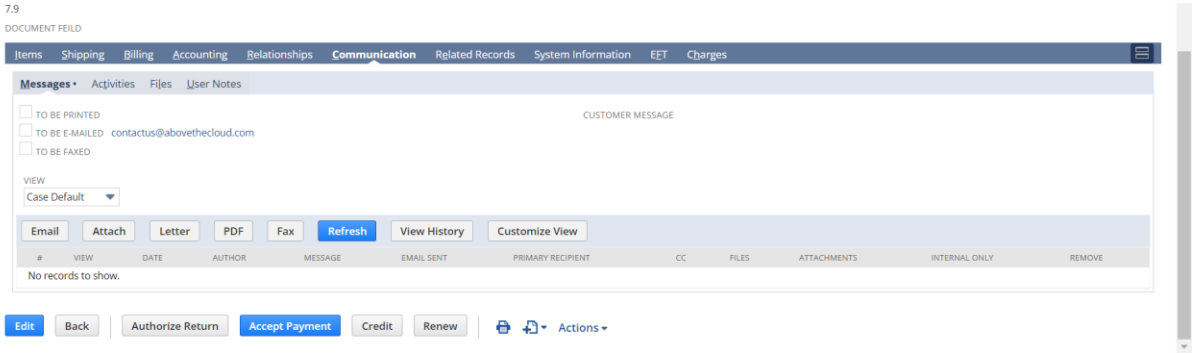


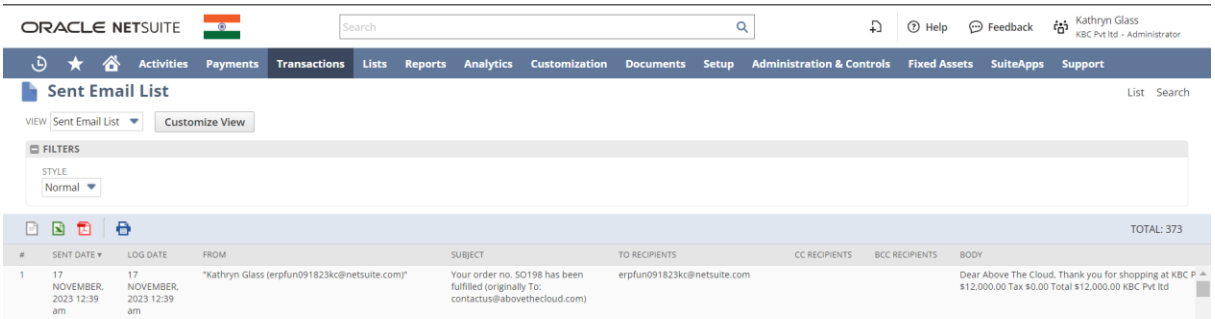
Step 5: Create an invoice in NetSuite based on the shipped items.





Step 6: This invoice is sent to the customer for payment through mail.



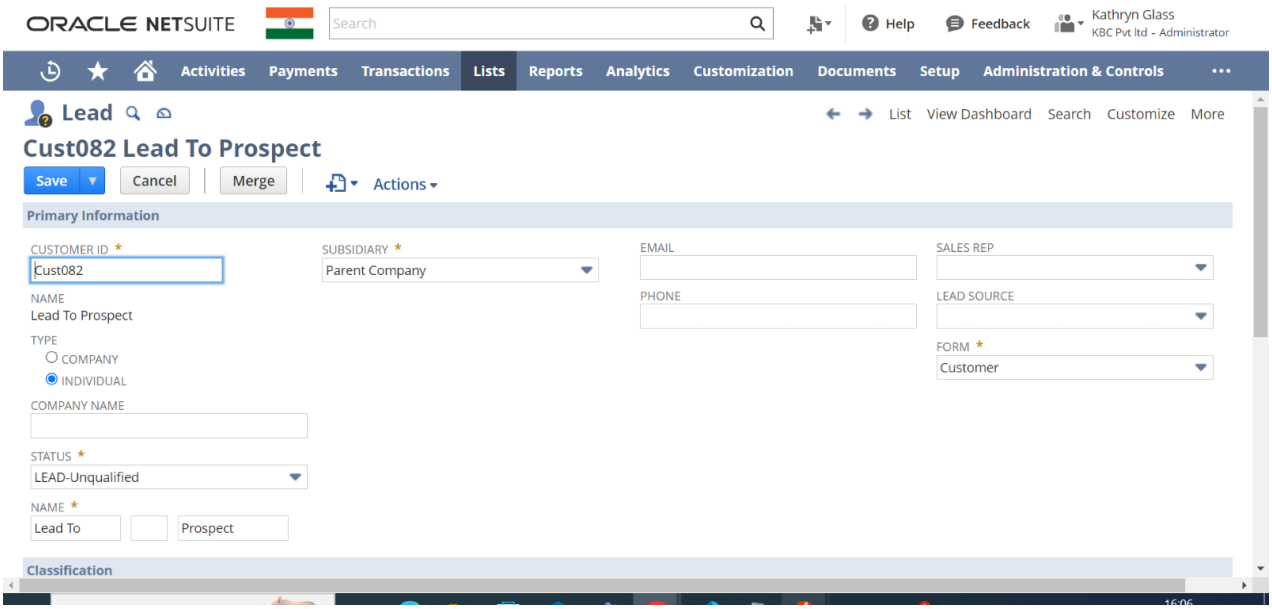


2. Convert the lead into a customer and write down the step-in detail.

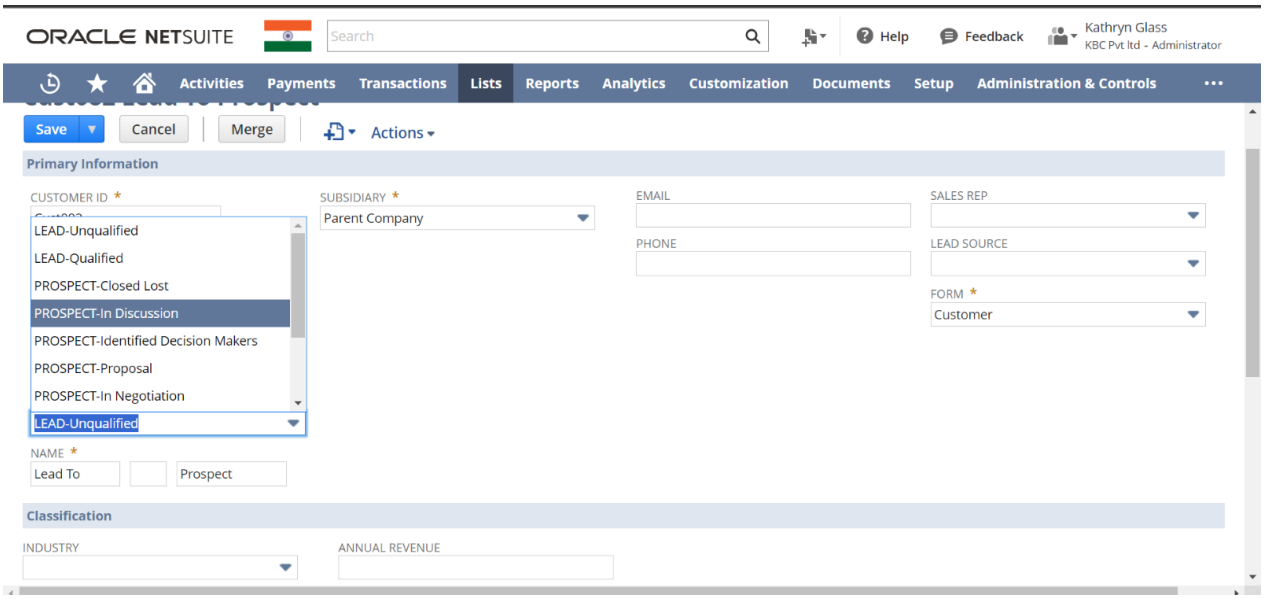
Ans.

- Create new lead & convert it into Prospect = Lists > Relationship > Leads > Edit > Status > Select PROSPECT In Discussion > Save
- Check weather lead become prospect = Lists > Relationship > Prospects > Lead will be added in the prospect record.
- Convert prospect to a customer = Lists > Relationship > Prospects > Edit > Status > Select CUSTOMER closed won > Save
- Check weather prospect become customer = Lists > Relationship > Customer > Prospect will be added in the customer record.

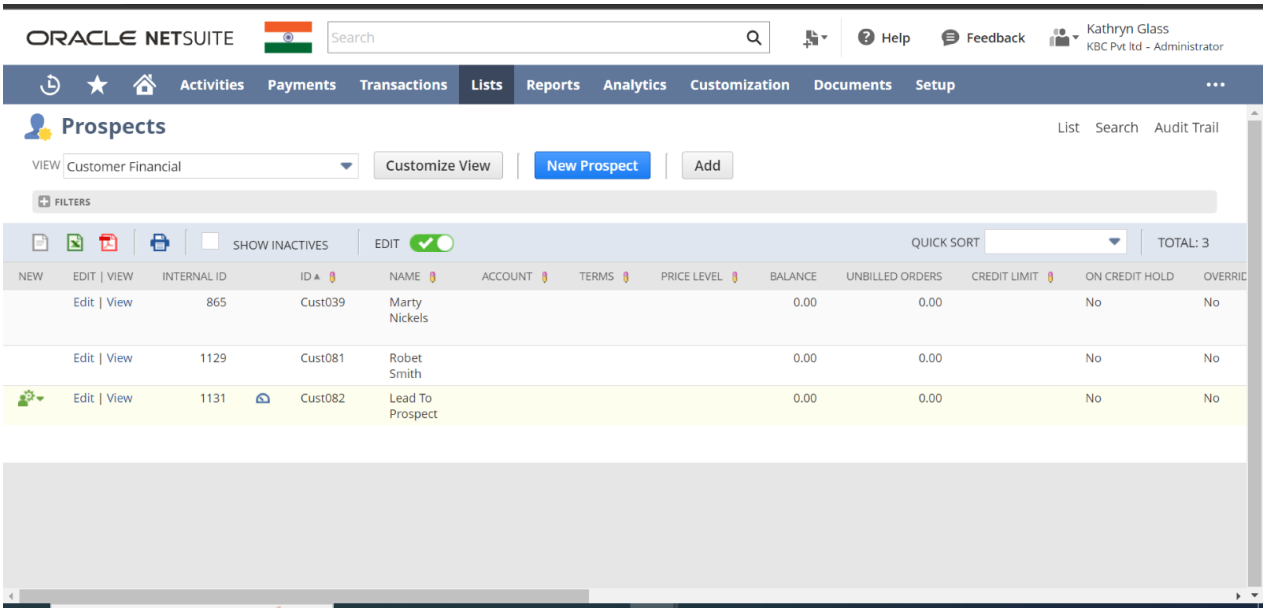
1.Create a new lead:



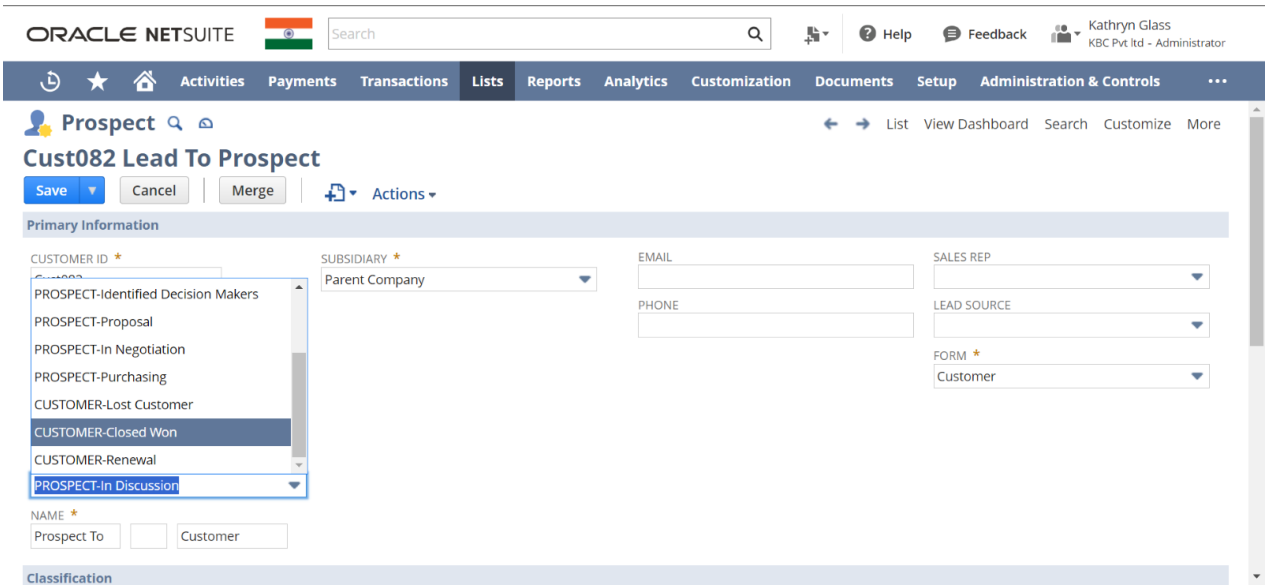
2. Convert lead to prospect:



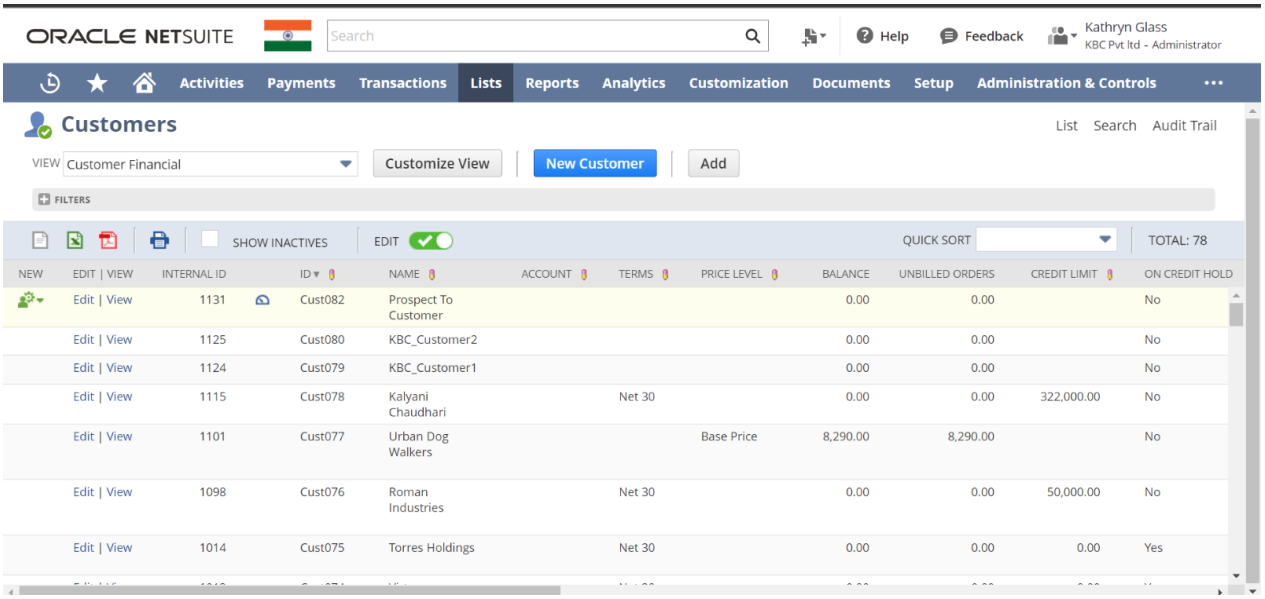
3.Lead gets add to prospect record:



4.Convert prospect to customer:



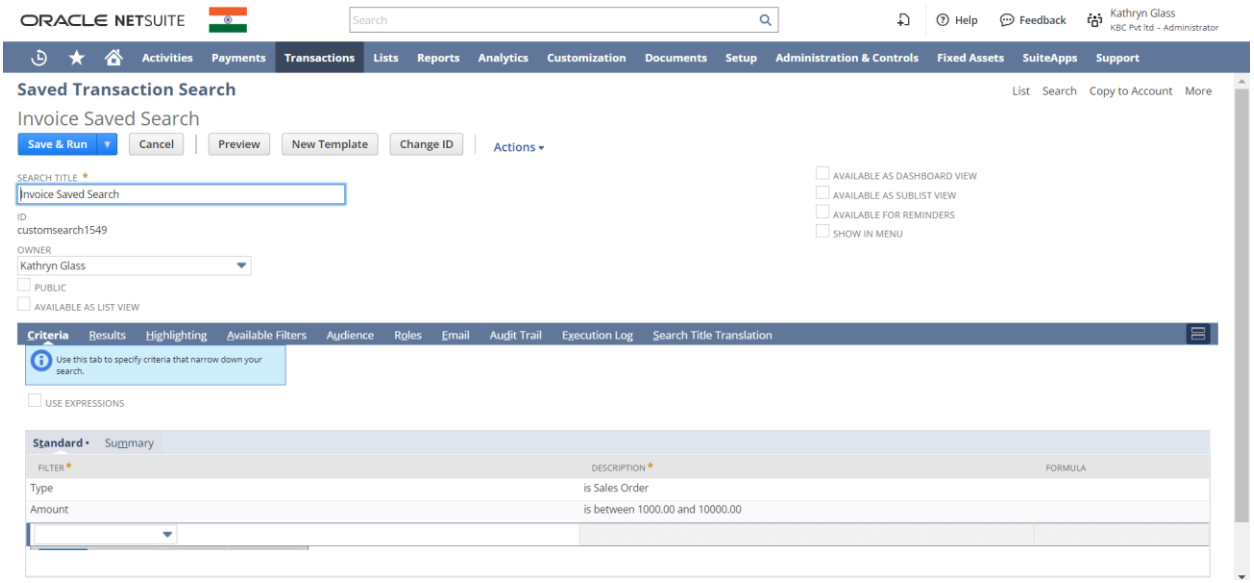
5.Prospect gets add to customer record:



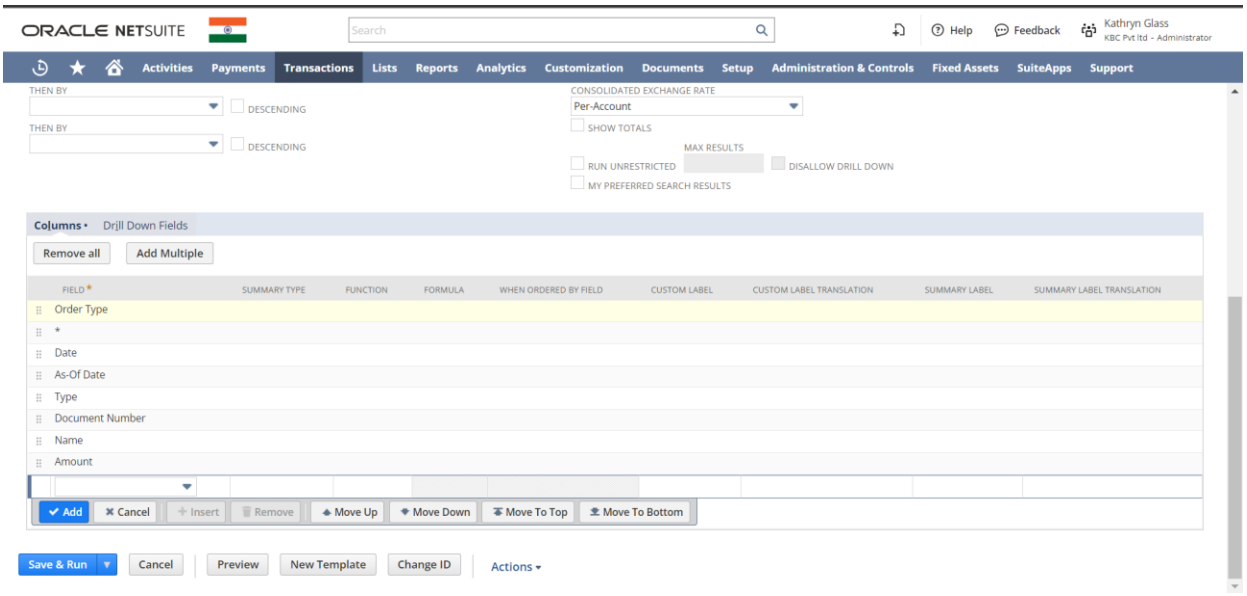
3. Create a saved search to display the list of invoices whose amount is between 1,000 to 10,000. Invoices with amounts below 5,000 should be displayed in green color and invoice with amount greater than 5,000 should display in red color.

Ans.

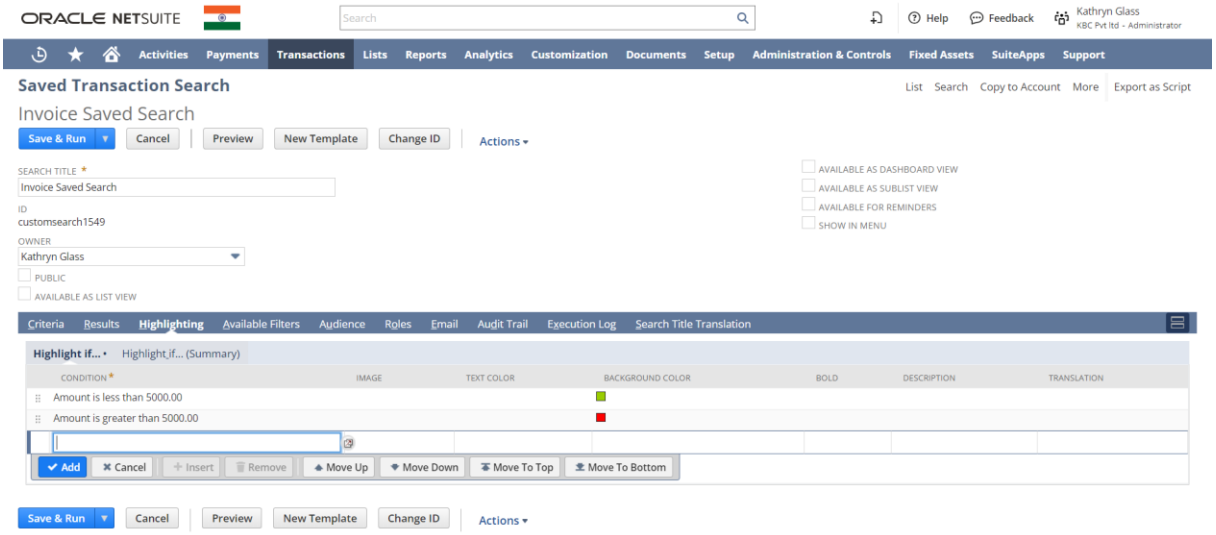
1.Create a saved search for invoice: Transaction >Sales > Create Invoice > New > Search



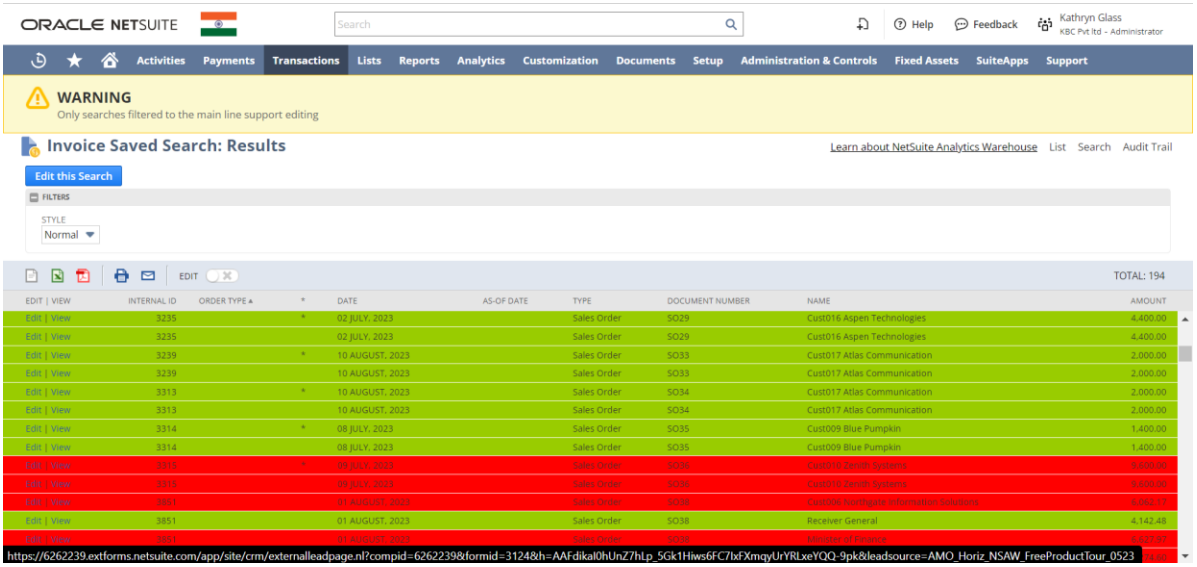
2.Columns for saved search



3.Highlighting rows according to amount



4.Saved search result



4. Implement the below scenario for sales order

- If Sales Order amount in between 1000 to 5000 display a warning message to user while saving the record. if user confirms then save the record if not then no action should be taken
- If amount is greater than 5000 then error message should be display with message “Need approval to save this sales order”.

Ans.

```
 *
 * @since 2015.2
 */
function validateField(scriptContext) {

    var objRecord = scriptContext.currentRecord

    var amount = objRecord.getValue({
        fieldId: 'total'
    });

    if (amount >= 1000 && amount <= 5000) {

        dialog.alert({
            title: "Warning",
            message: "The Sales Order amount is between 1000 and 5000. Do you want to proceed with saving the record?",
        });
        dialog.confirm({
                title: "Confirmation",
                message: "Do you want to save the record?",
            })
            .then(function (result) {
                if (result) {
                    return true;
                } else {
                    return false;
                }
            });
    } else if (amount > 5000) {

        dialog.alert({
            title: "Warning",
            message: "Need approval to save this sales order. Please contact the administrator.",
        });
        return false;

    }
}
```

5. Calculate the running total of the invoice and display on the “Running total” custom field.

Ans.

1.Create a custom field ‘Running Total’ on invoice standard form

2.Intialise a ‘lineCount’ of sub list in lineInit()

3.And then We will run For loop for ‘lineCount’ times

4.Amount value of each sublist line will fetch using Obj. getSublistValue ()

5.This amount will add to Running amount

```
/**
* @NApiVersion 2.x
* @NScriptType ClientScript
*/
define(['N/currentRecord'],

function(currentRecord) {

    function lineInit(scriptContext) {
        var currentRecordObj = scriptContext.currentRecord;

        var lineCount = currentRecordObj.getLineCount({
            sublistId: 'item'
        });

        var runningTotal = 0;

        for (var i = 0; i < lineCount; i++) {
            var lineAmount = currentRecordObj.getSublistValue({
                sublistId: 'item',
                fieldId: 'amount',
                line: i
            });

            runningTotal = runningTotal + lineAmount;
        }

        currentRecordObj.setValue({
```

```
            sublistId: 'item'
        });

        var runningTotal = 0;

        for (var i = 0; i < lineCount; i++) {
            var lineAmount = currentRecordObj.getSublistValue({
                sublistId: 'item',
                fieldId: 'amount',
                line: i
            });

            runningTotal = runningTotal + lineAmount;
        }

        currentRecordObj.setValue({
            fieldId: 'custbody3',
            value: runningTotal
        });

        return true;
    }

    return {
        lineInit: lineInit
    };

});
```

6.Amount will get display in ‘Running Total’ custom field

7.If new line get insert, amount will get added

8.If line get delete, amount will get subtract

6. Write a script to add ‘other charge’ item on end of the sales order line level item. And its amount will be the sum of all existing items of the sales order and quantity would be hard coded to 1.

Ans.

1.Create a new Item ‘Custom Other charges’ in standard list of Items and Get Id of Record using Obj.id

2.Use record.load() and load the sales order

3.Select New Line and use setCurrentSublistValue() to add ‘Custom Other charges’ item in sub list ‘items’

4.Likewise set value for quantity as a 1

5.And Amount will be total amount of all items has added in sales order

```
/**
 * @NApiVersion 2.x
 * @NScriptType UserEventScript
 */

define([ 'N/record' ],function(record){
    function afterSubmit(context){

        var Obj = context.newRecord

        var id_Record = Obj.id

        var type_Record = Obj.type

        var ObjRecord = record.load({
            type: record.Type.SALES_ORDER,
            id: id_Record,
            isDynamic: true,
        });

        ObjRecord.selectNewLine({
            sublistId: 'item'
        });

        ObjRecord.setCurrentSublistValue({
            sublistId: 'item',
            fieldId: 'item',
            value: 417
        });

        ObjRecord.setCurrentSublistValue({
```

```
        ObjRecord.setCurrentSublistValue({
            sublistId: 'item',
            fieldId: 'item',
            value: 417
        });

        ObjRecord.setCurrentSublistValue({
            sublistId: 'item',
            fieldId: 'quantity',
            value: 1
        });

        var amountTotal = ObjRecord.getValue({
                fieldId: 'total'
        });

        ObjRecord.setCurrentSublistValue({
            sublistId: 'item',
            fieldId: 'amount',
            value: amountTotal
        });

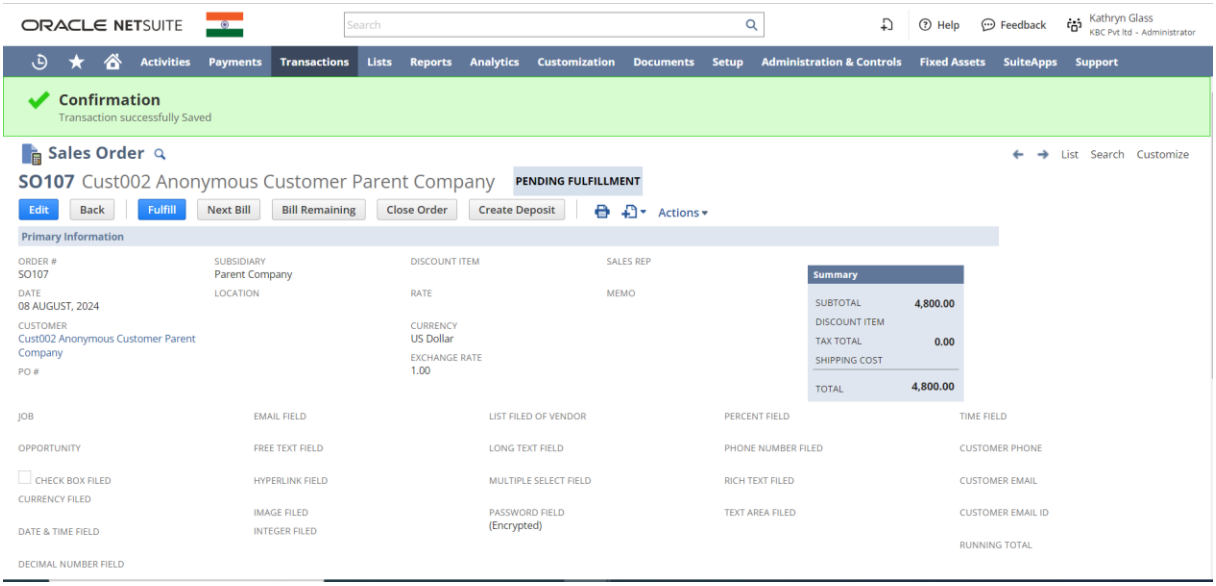
        ObjRecord.commitLine({
            sublistId: 'item'
        });

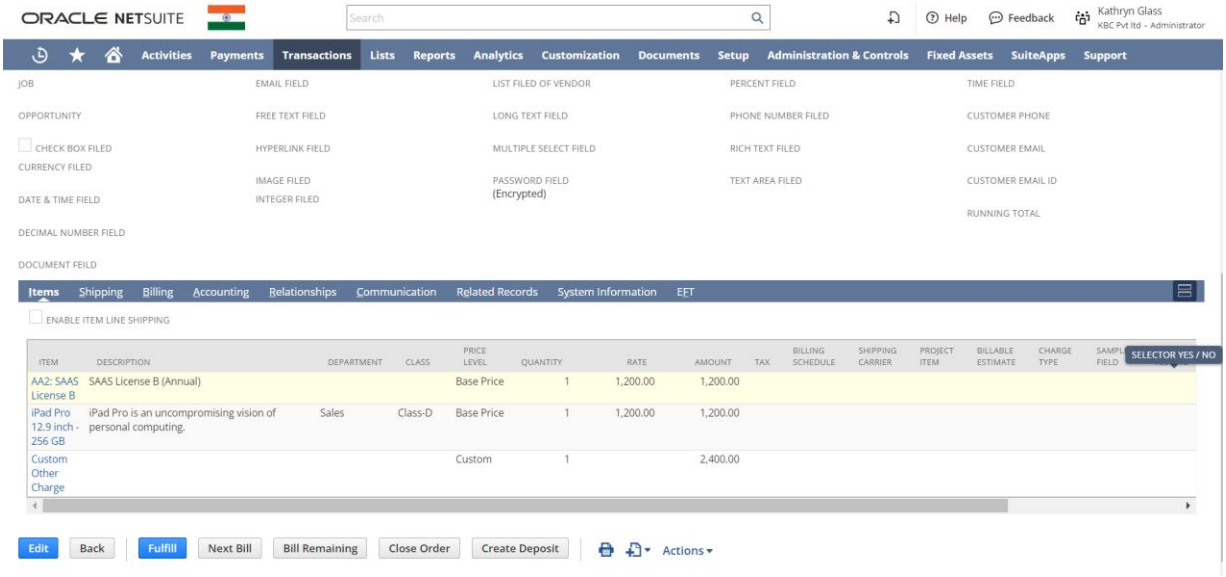
        try {
            var recId = ObjRecord.save();
            log.debug({
                title: 'Record created successfully',
```

```
        });

        ObjRecord.commitLine({
            sublistId: 'item'
        });

        try {
            var recId = ObjRecord.save();
            log.debug({
                title: 'Record created successfully',
                details: 'Id: ' + recId
            });
        } catch (e) {
            log.error({
                title: e.name,
                details: e.message
            });
        }

        var sublistFieldValue = ObjRecord.getSublistValue({
            sublistId: 'item',
            fieldId: 'item',
            line: 0
        });
        log.debug('sublistFieldValue' , sublistFieldValue)
    }
    return {
        afterSubmit: afterSubmit
    };
});
```




6.Once sales order gets saved, new line item has added i.e. ‘Custom Other Charges’
