3. What is the use of MICR Gauge explain in detail & why do you need a MICR Gauge?

Ans.

- NetSuite is an enterprise resource planning (ERP) and financial management software, and it primarily focuses on various aspects of financial management, accounting, and business operations.
- Hence, MICR (Magnetic Ink Character Recognition) is a technology used in banking and finance for check processing in NetSuite.

ADDITIONAL QUESTION

1. Difference between Body level and Sub list field with example.

Ans.

Body Level:

- The "Body" refers to the primary section of a record or transaction form. It contains the main information and fields that pertain to the record as a whole.
- Body fields are used to capture data that applies globally to the entire record.
- For example, in a Sales Order, the customer's name and shipping address are typically body fields.

Sub list Field:

- Sub lists are sections record or transaction form that contain line items or rows of related data. Sub lists allow you to enter multiple items, expenses, or other details associated with the main record.
- Sub list fields are used to enter data that applies uniquely to each line item within the record.
- For example, in a Purchase Order, each line item may have sub list fields for the item being ordered, quantity, rate, and total.

2. Difference between Tab, sub tab, sub list, center tab, center link, center category.

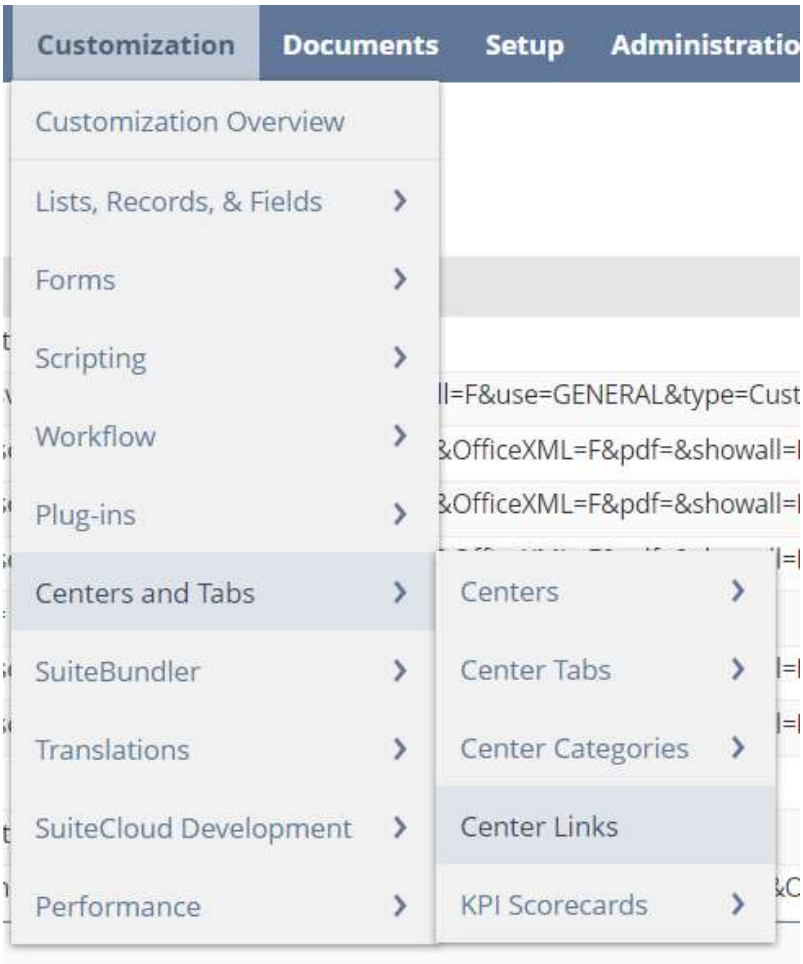
Ans.

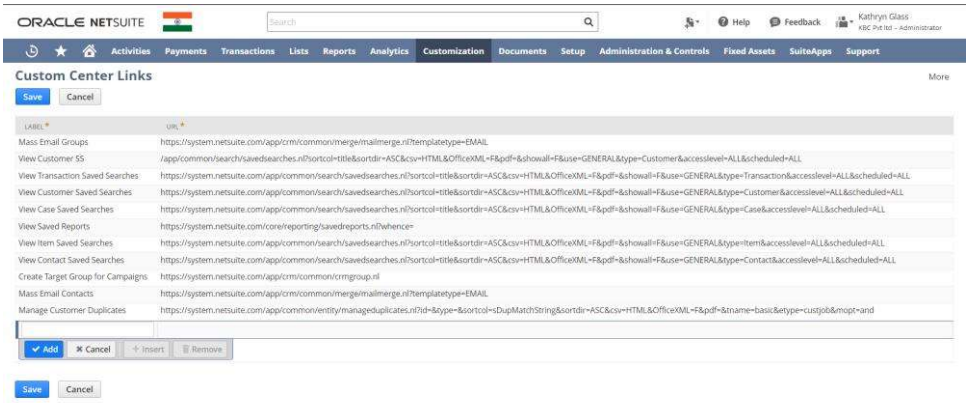
1.Tabs: Tabs are main Navigation menu on NetSuite Dashboard

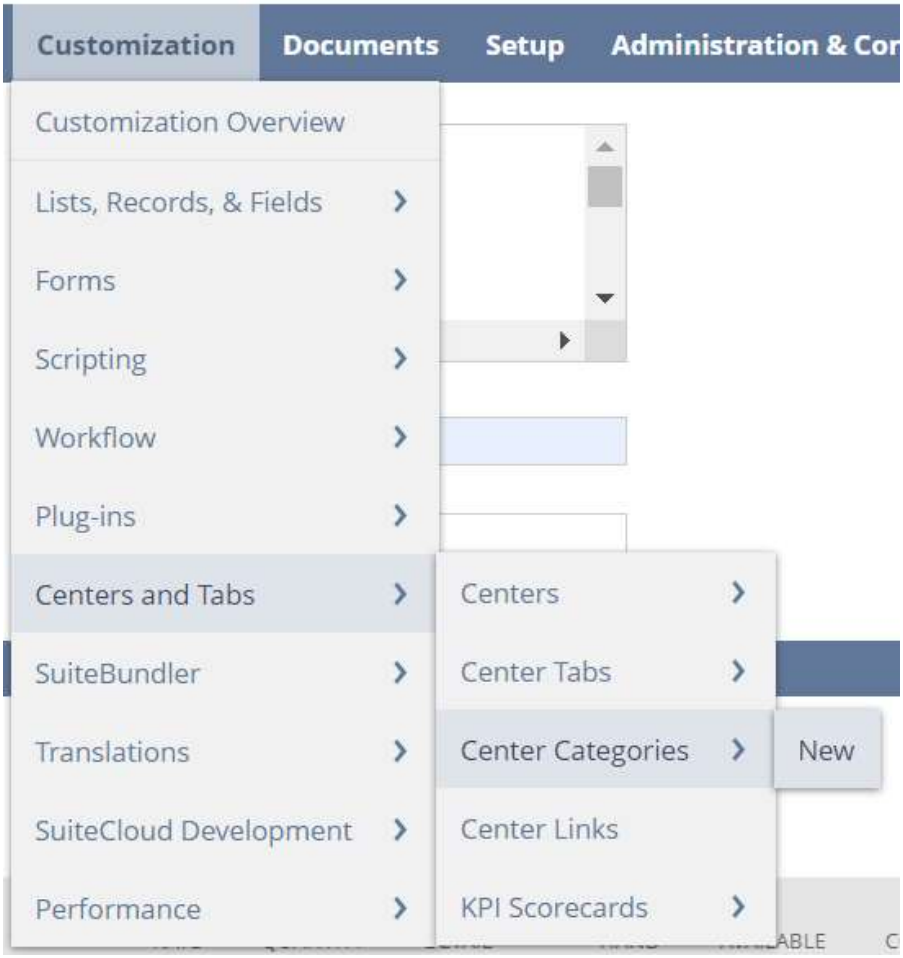
2.Sub tab: Tabs which come after body fields for any record form. For example, we have subtab of item, shipping etc. in Sales order form

3.Center tab: Center tabs are main Navigation menu on NetSuite Dashboard

4. Center link: Center links that appear on own custom categories as well as on standard, built-in NetSuite categories. We can create new center links







5. Center category: Center categories to organize and classify various records within account. Center categories can be used in a variety of contexts, including items, customers, vendors, and transactions.
