Customization of lists, segment and Fields

Q.1. What is the standard list and custom list and how do we create the following list? List of the Employees Category.

- Technical
- Functional
- Team Lead
- Project Manager
- Techno Functional

Ans.

1.Standard Lists:

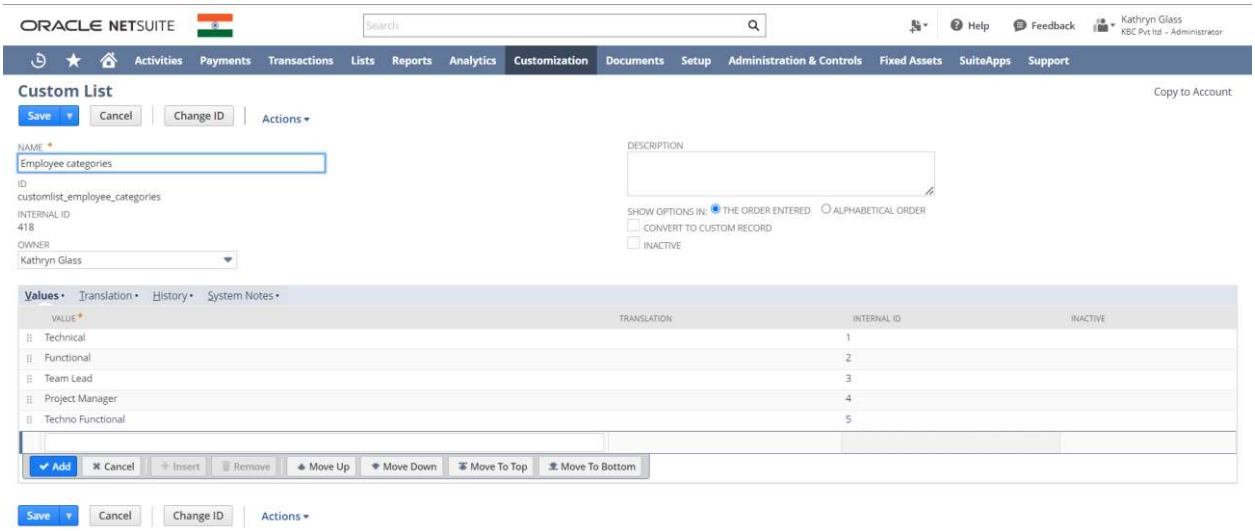
- Standard lists are predefined lists of values that are provided by NetSuite. These lists often include common values used in various areas of the system, such as transaction countries, currencies, customer, vendor etc.
- Standard lists are managed by NetSuite itself, and generally we cannot modify them. They are used to ensure consistency and accuracy of data entry and reporting throughout the system.

2. Custom Lists:

- Custom lists are user-defined lists that we can create and customize to suit our specific business needs. These lists can be used to store data that is unique to our organization, such as custom transaction types, project, product, or any other data that we need to categorize.
- Custom lists provide flexibility, allowing us to define our own values and manage them according to our requirements. We can create, modify, and maintain custom lists. We can use these lists for tracking and reporting purposes as well.

3.Create a new list of Employee category:

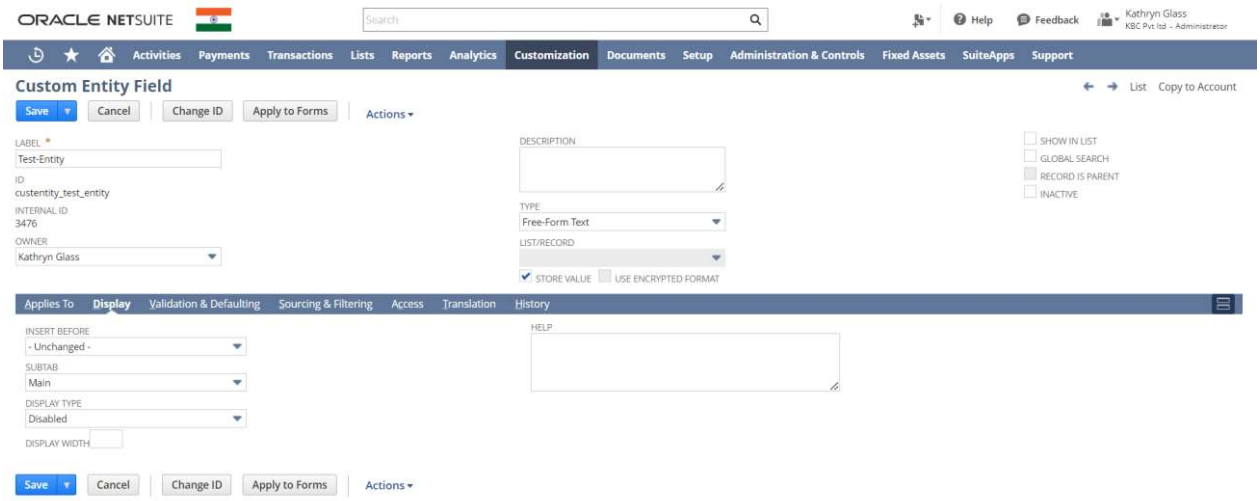
- Customization > List, Record & Fields > Lists > New



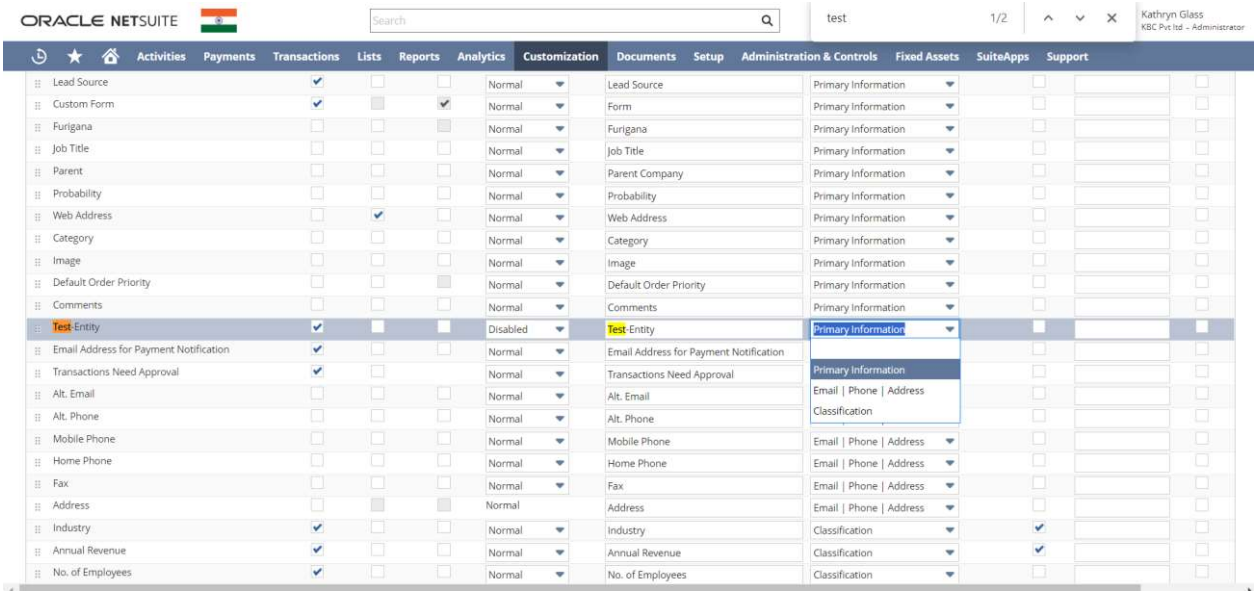
Q.2. Create a one custom field (Test-Entity) on customer record in primary classification and disabled it?

Ans.

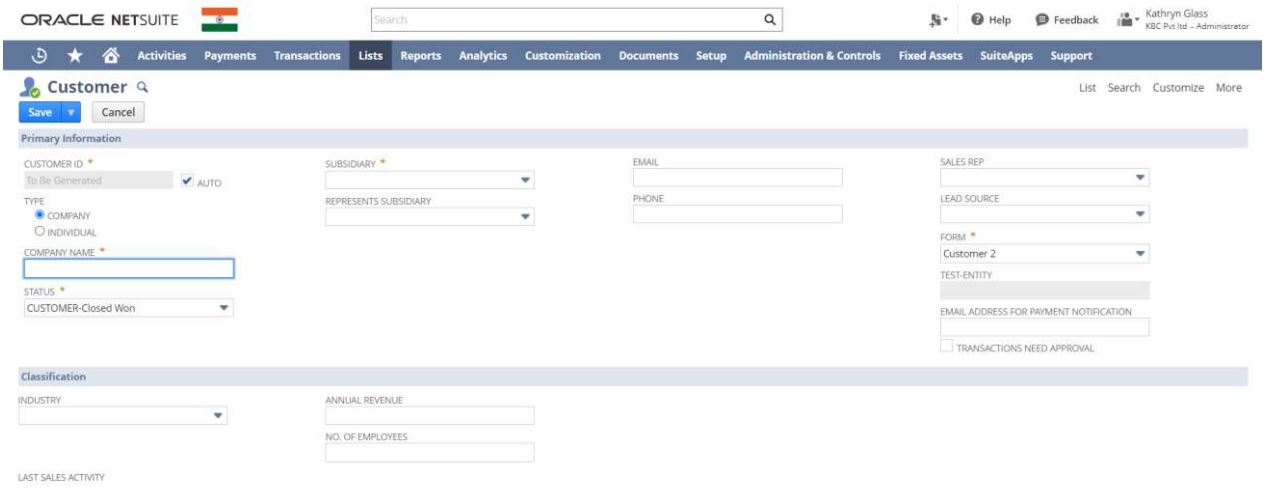
- Create custom field on customer form: List > Relationship > Customer > New Customer > Customize > Custom form > Fields > Main > New Field > Enter label “Test-Entity” > Enter Id > Applied to > Check “Customer” > Display type “Disable” > Display > Subtab > select “Main” > Save



- List > Relationship > Customer > New Customer > Customize > Custom form > Fileds > Main > find label “Test-Entity” > Select filed group “Primary classification” > Save



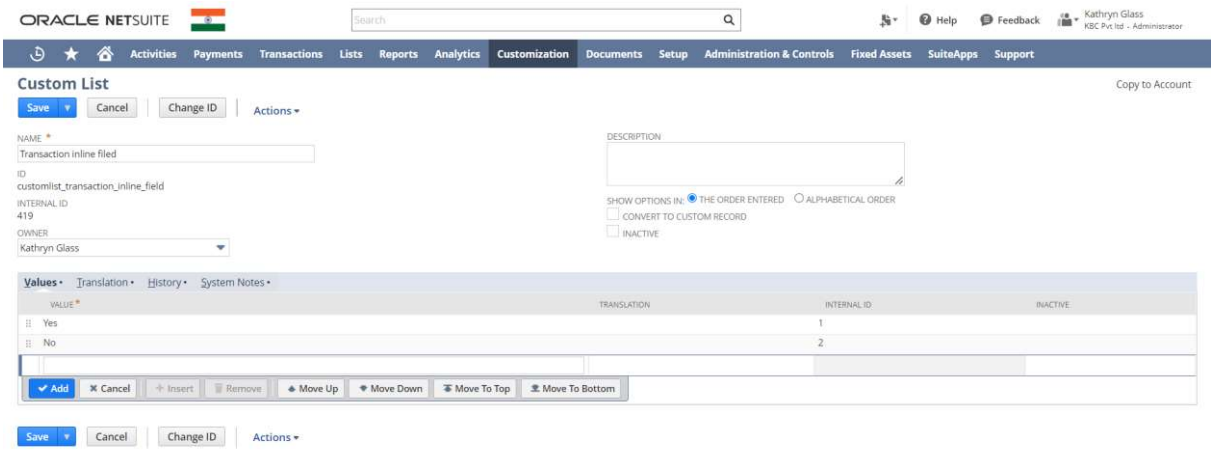
- Disable new custom field visible in customer form



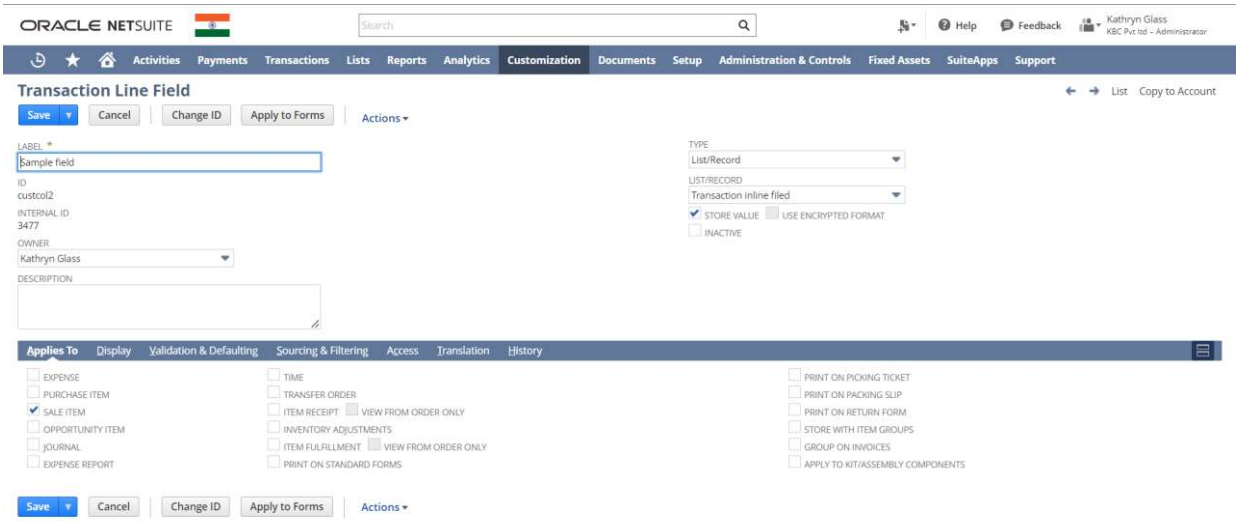
Q.3. Create a one transaction line field on sales order with list “YES” and “NO”.

Ans.

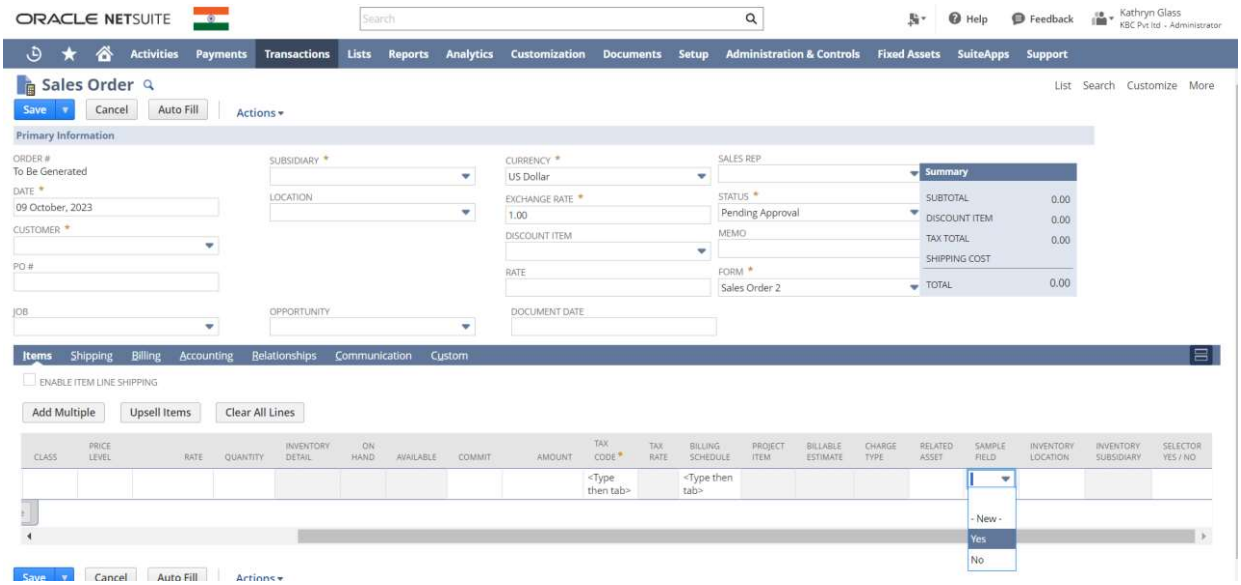
- Customization > List, Record & Fields > Lists > New



- Customization > List, Record & Fields > Transaction inline filed > New > Select filed type “List” > Select custom field > Applied to “Sale item”



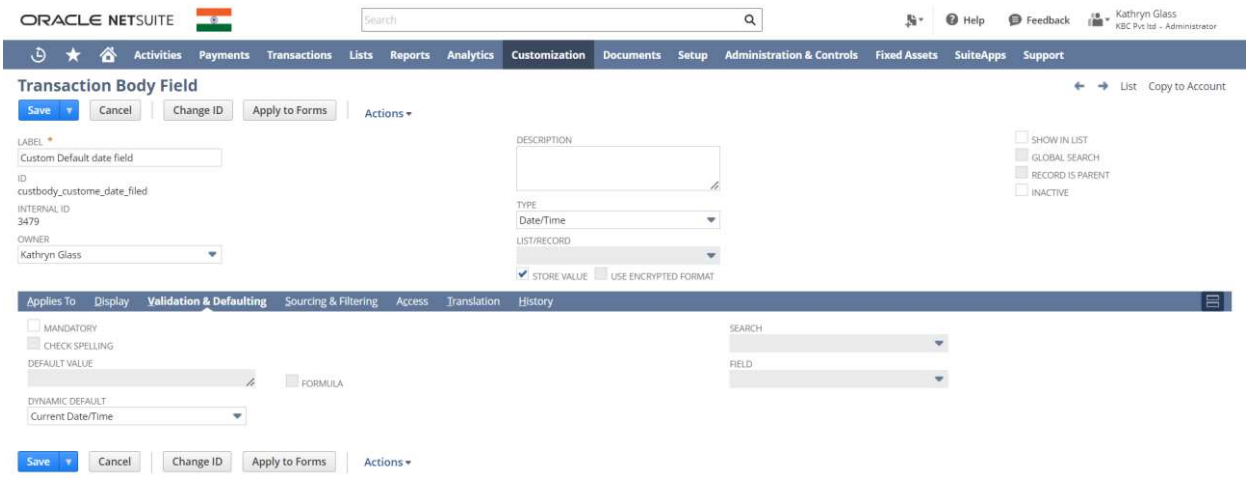
- Transaction > sales > Enter sales order > Items > New inline column filed will be added

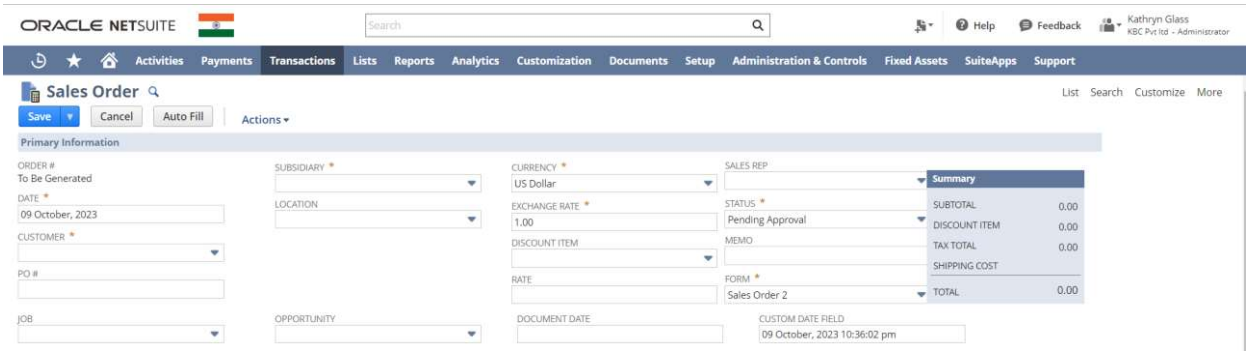


Q.4. Create a field on sale order and set as current default date & time?

Ans.

- Create custom filed in sales order: Transaction > Sales > Enter sales order > Customize > New body filed > Enter label > Enter ID > Type select Date/Time > Applied to check “Sale” > Display > Subtab select “main” > Validating & Defaulting > Dynamic default > Select Current Date/Time > Save
- “Custom date field” is field name





Q.5. What is the store value in fields?

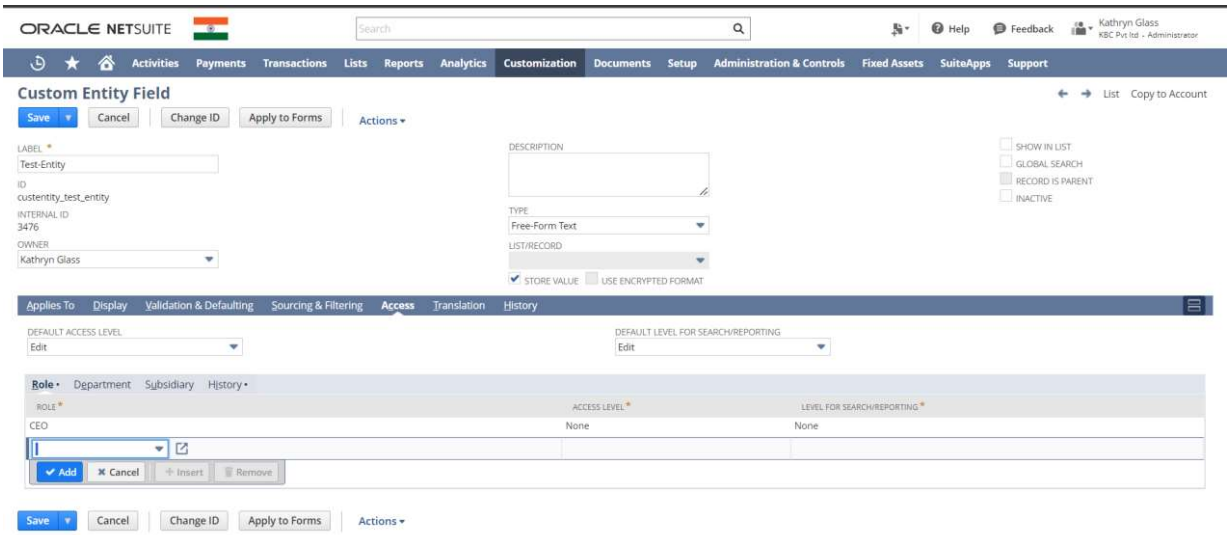
Ans.

- A "Stored Value" to the value stored in a custom field within a record. It is the specific data that you enter or retrieve for a particular field on a particular record.
- For example, if we have a custom record called "Customer Feedback" and we have created a custom field called "Feedback Description," the data entered the "Feedback Description" field for a specific customer's feedback entry is considered the "Stored Value" for that field on that record.
- This store value will be store on database

Q.6 How we restrict by specific role for custom field, please do the activity on (Test- Entity)?

Ans.

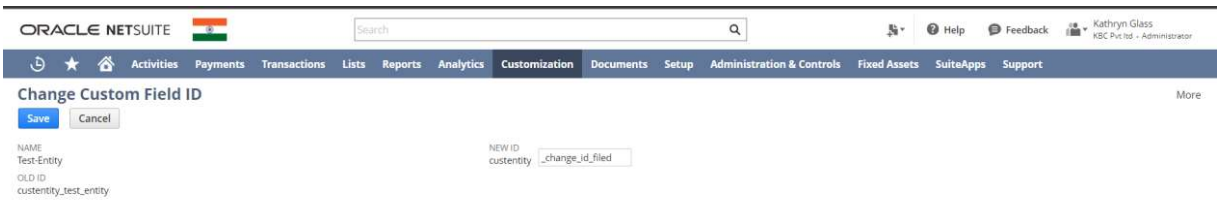
- Create custom field on customer form: Customization > List, Records & filed > Entity filed > Find entity “Test-Entities” > Edit > Access > Role > Enter role > Enter access level “none” > Enter level for searching “none” > Save



Q.7. Once saved, in a custom field can we change the ID of the field?

Ans.

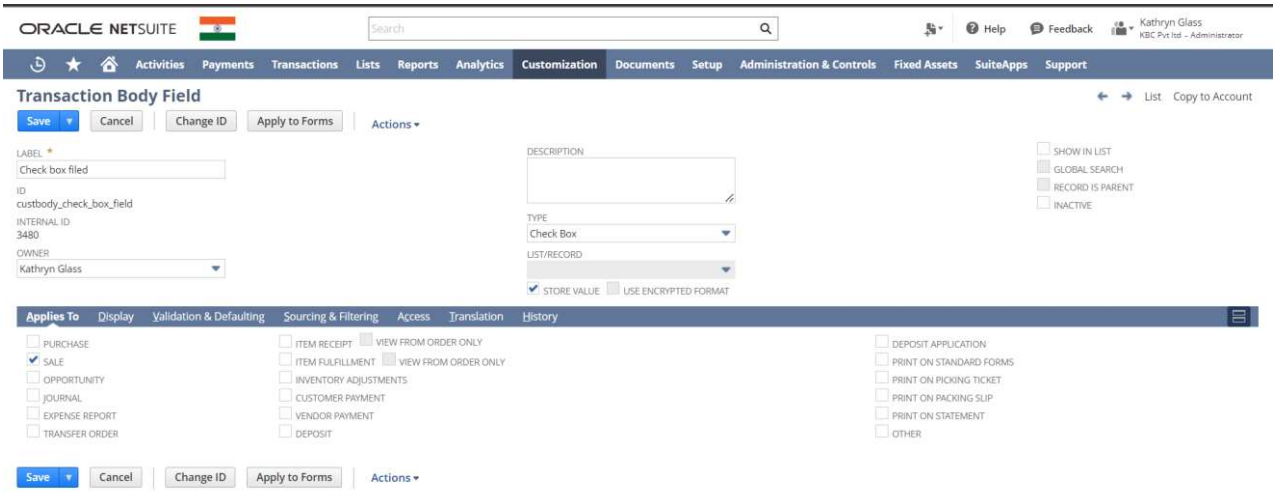
- Yes, we can change Id of filed:
- Customization > List, Records & filed > Entity filed > Find entity “Test-Entities” > Change ID > Enter new ID name > Save



Q.8. Create all Types of Custom fields in an Invoice and fill in the data for one invoice.

Ans.

- Transaction > Sales > Create invoice > Customize > Edit form name “Custom Invoice form”>Disable the unnecessary fields > New Fileds
- Create new fields
- Type: Check box > Applied to check “sales” > Display selects “Main”



- Likewise, we will create custom field for each type
