Form Customization in NetSuite

Q.1. What are forms in NetSuite? What type of forms are present in NetSuite? Explain.

Ans.

Forms refer to user interface elements used for data entry, display, and customization. Forms help users to interact with the system and how to input, view, and edit data.

Type of forms:

1.Record Forms:

- These forms are associated with specific record types, such as customers, vendors, leads, opportunities, and more.
- Record forms allow users to view and edit the details of individual records. Each record type typically has its own associated form.

2.Transaction Forms:

- Transaction forms are used for entering and managing transactions within NetSuite. Transaction forms include sales orders, purchase orders, invoices, and expense reports.
- These forms enable users to input transaction details and process financial transactions.

3.Entry Forms:

- Entry forms are typically used for data entry and may include fields and sections for capturing specific information related to a particular record or transaction. They simplify the data entry process for users.

4.Custom Forms:

- NetSuite allows users to create custom forms tailored to their specific business needs. Custom forms can be used for various purposes, including data entry, display, or customization.
- We can design custom forms by adding or rearranging fields, tabs, and subtabs as needed.

5.Saved Search Forms:

- We create saved searches to retrieve specific data, we can choose to display the search results in a saved search form.
- These forms allow users to interact with and further analyze the search results.

6.Suitelet Forms:

- Suite lets are custom scripts that enable us to create custom web forms and user interfaces within NetSuite. Suite let forms can be designed to interact with specific records or processes or user experience.

7.Portlet Forms:

- Portlets are small sections of content displayed on NetSuite dashboards. Portlet forms allow us to customize the content and layout of these dashboard elements, providing quick access to important information.

Q.2. What is the navigation to create a form in NetSuite?

Ans.

1.Navigation to create a form: Customization > form > Entry forms, Transaction forms & Address form

2.We can customize existing standard forms like customer form, employee form, sales order form, purchase order, vendor form etc.

Q.3. Create one Custom customer form:

- Named as 'New Customer form'
- With the below fields present:
    - Email
    - Phone
    - Category
- Make Email & Phone field Mandatory
- Remove 'User Notes' subsist from the form.
- Make sure this form is preferred.

Ans.

1.To create custom customer form: Transaction > Relationships > Customer > New customer > Customize form > Edit form name as a "New Customer form" > Field > Main > Check "Email", "Phone", "Category" > Uncheck unnecessary field > Check "Mandatory for Email & phone

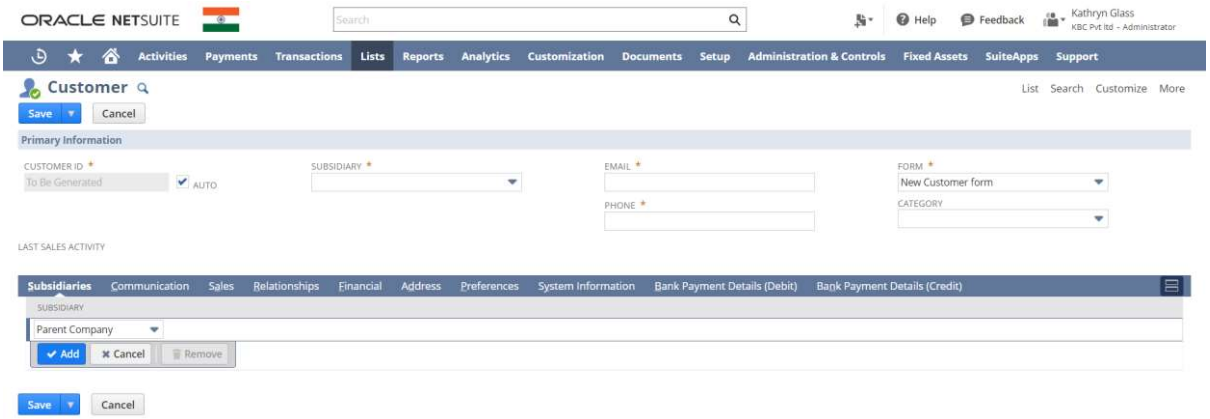
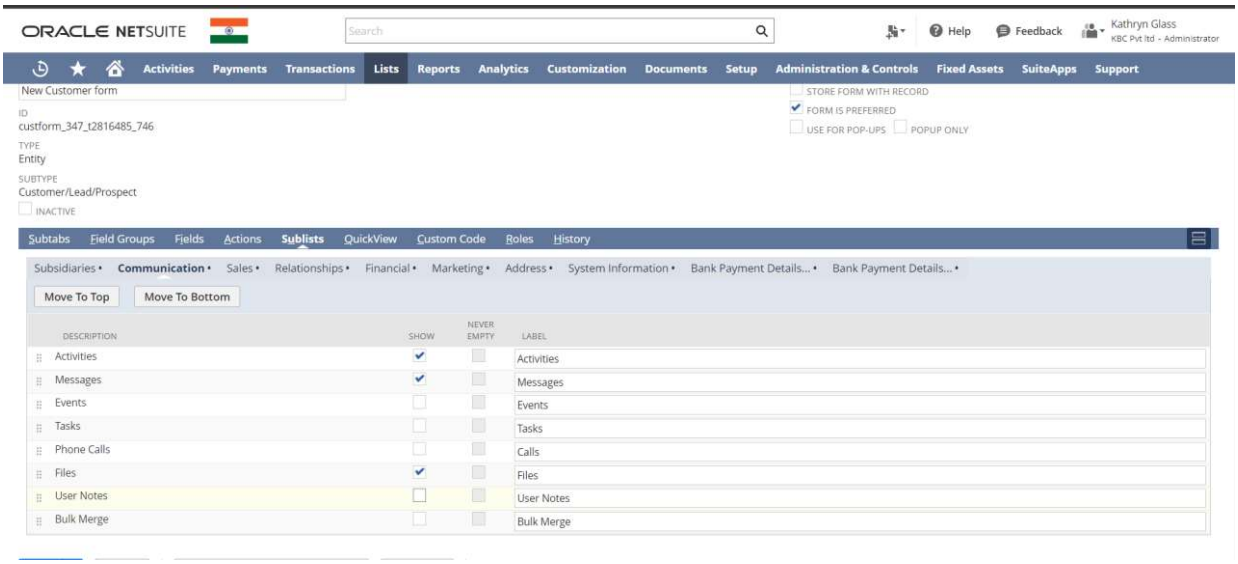
- New custom form:

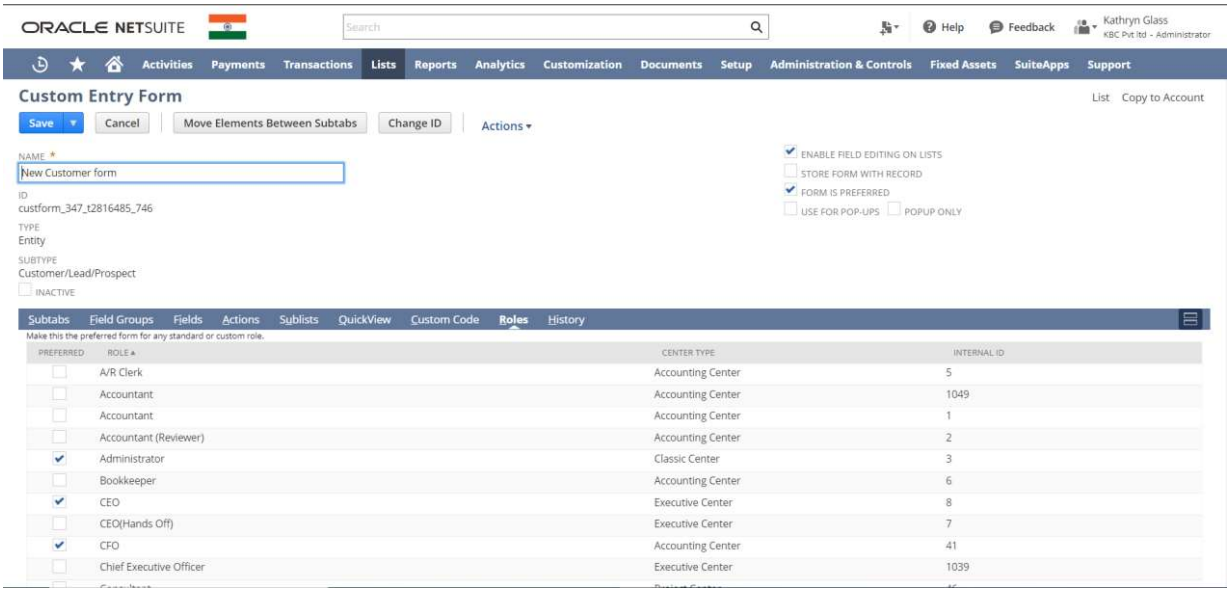


2. To remove “User notes”: Transaction > Relationships > Customer > New customer > Select form “New Customer form” > Customize form> Sub list > Communication > uncheck “User notes”



- User Notes sub list has been removed from Communication subtab

3. To make form preferred: Transaction > Relationships > Customer > New customer > Select form "New Customer form" > Customize form> Roles > Check "Preferred" for Administrator, CEO & CFO



Q.4. Create One Custom form for the Vendor and the created form should be preferred for the below roles (If we open Vendor form from this role new custom form should get open)

Roles:

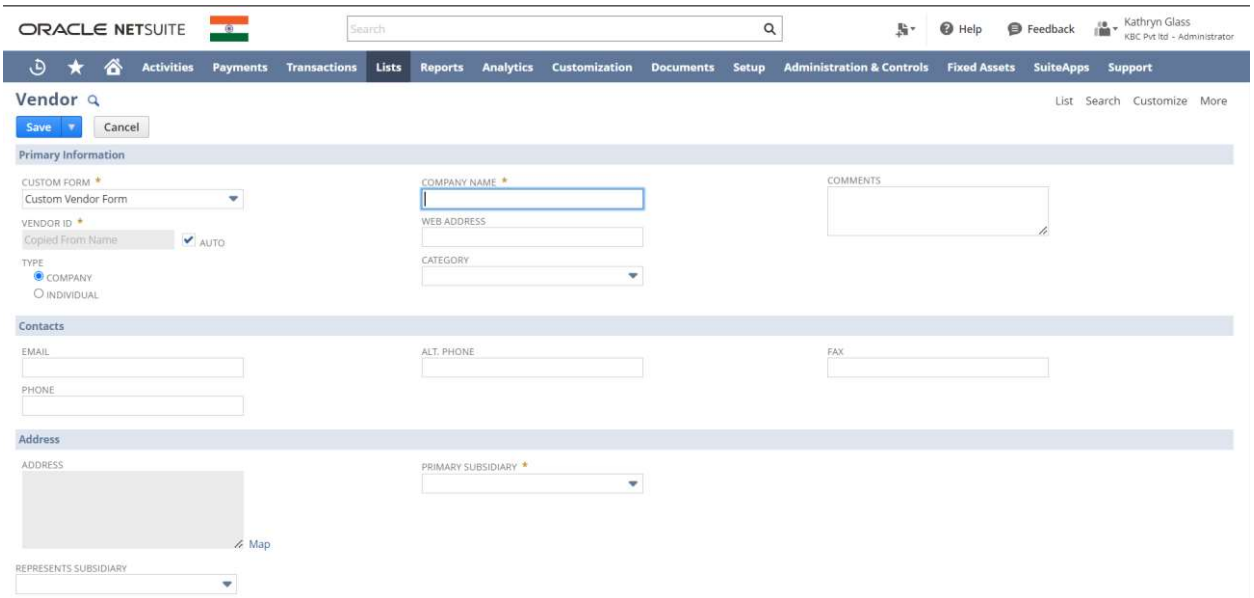
- CEO

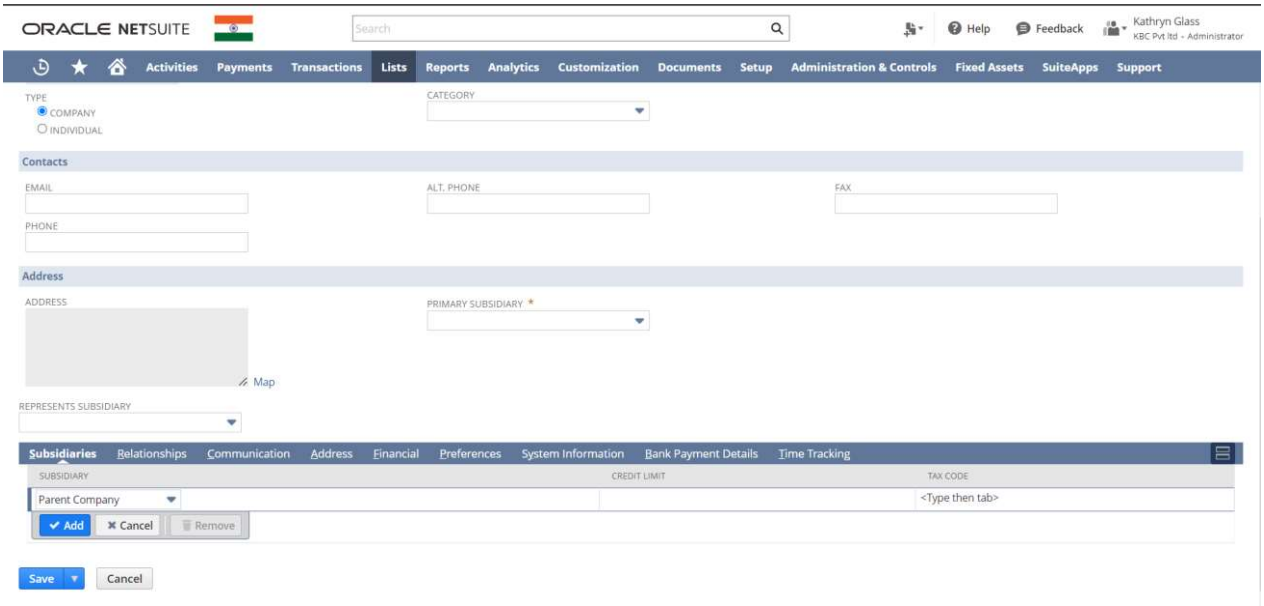
- CFO

- Accountant

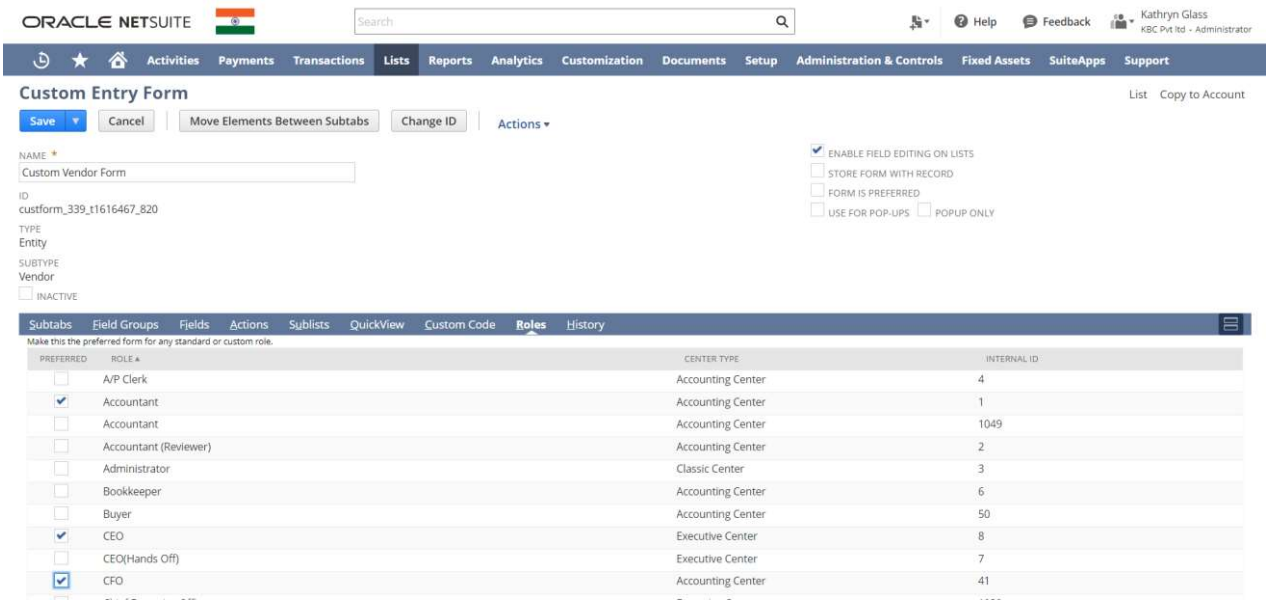
Ans.

1.To create a new custom vendor form: Lists > Relationship > Vendor > Customize > Custom form > Filed group > Create a new filed groups > fields > Check requires fields > Select Field group for each field from dropdown





2.To make prefer form: Lists > Relationship > Vendor > Customize > Custom form > Roles > Check "Preferred" for Accountant, CEO & CFO



Q.5. Create Two new custom fields from the form:

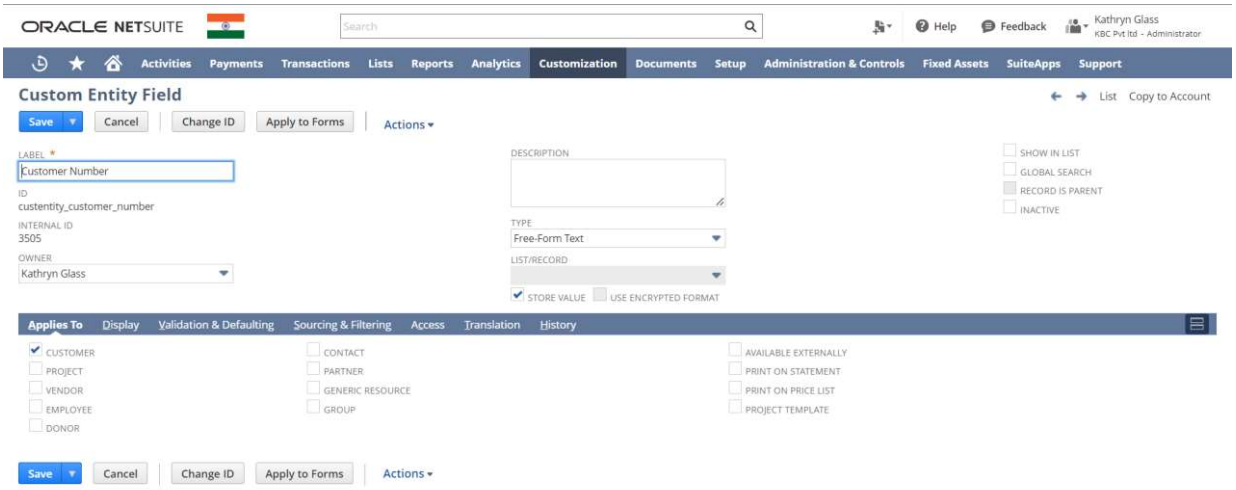
- Customer Number

- Customer New Mail Id

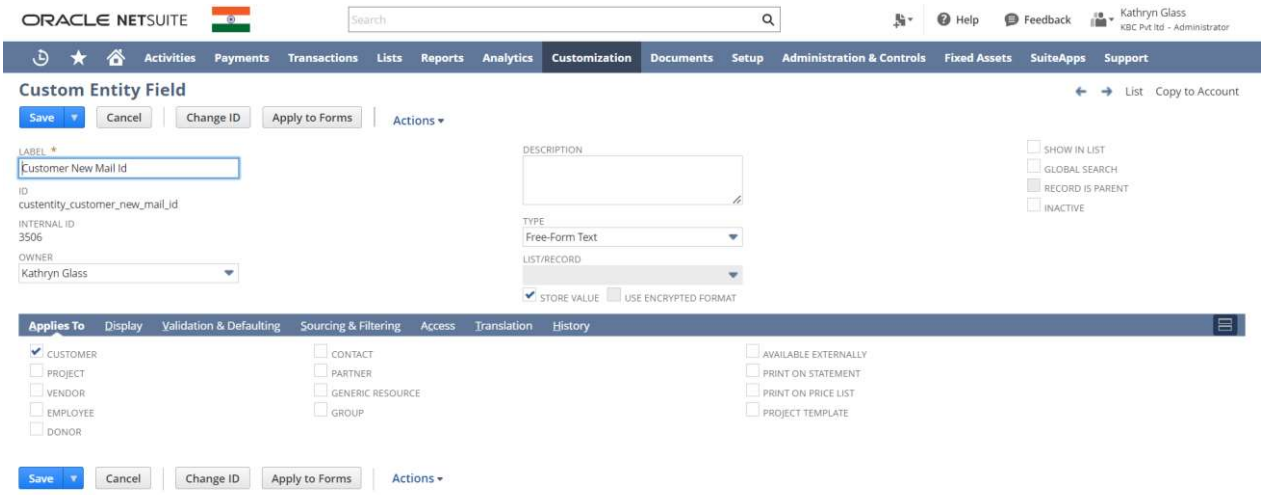
- Created fields should be visible in the primary information.

Ans.

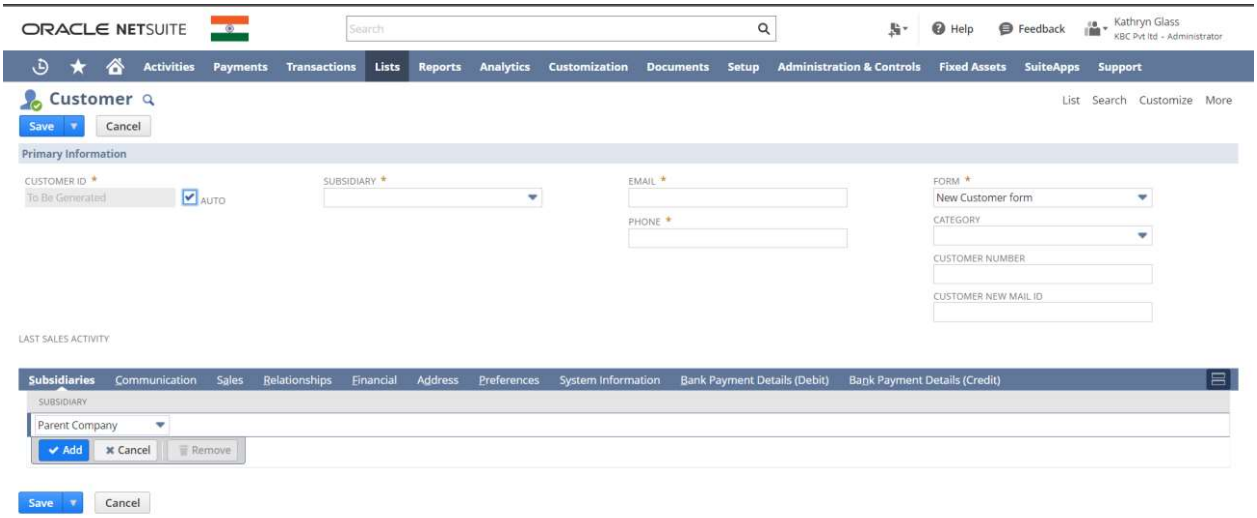
1.To create custom customer form: Transaction > Relationships > Customer > New customer > Customize form > Select form name as a “New Customer form” > Field > New Fields > Enter label “Customer number” > Applied to “Customer “> Display “Main”



2.To create custom customer form: Transaction > Relationships > Customer > New customer > Select form name as a “New Customer form > Customize form > Field > New Fields > Enter label “Customer Email Id” > Applied to “Customer “> Display “Main”



3.Lists > Relationship > Vendor > Customize > Custom form > Filed > Main > Select filed group as a “Primary information” > Save

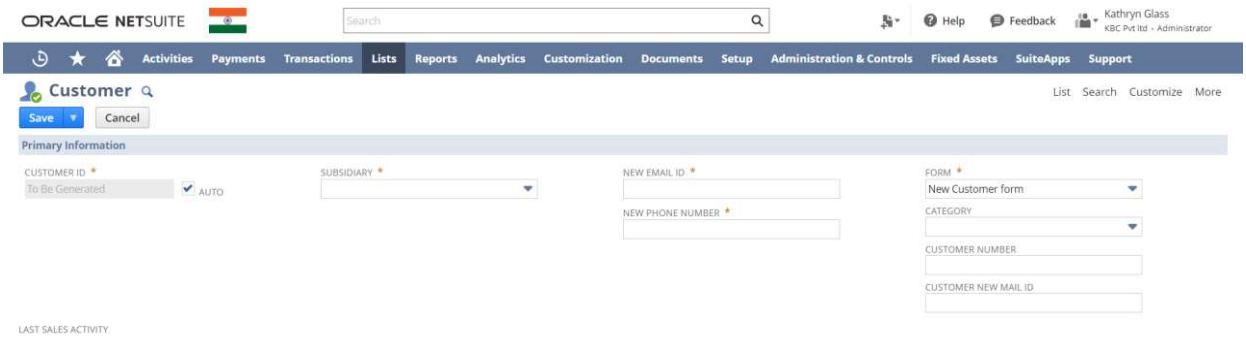


Q.6. In the created customer form change the name of the fields below:

ü Phone to New Phone Number

ü Email to New Email Id

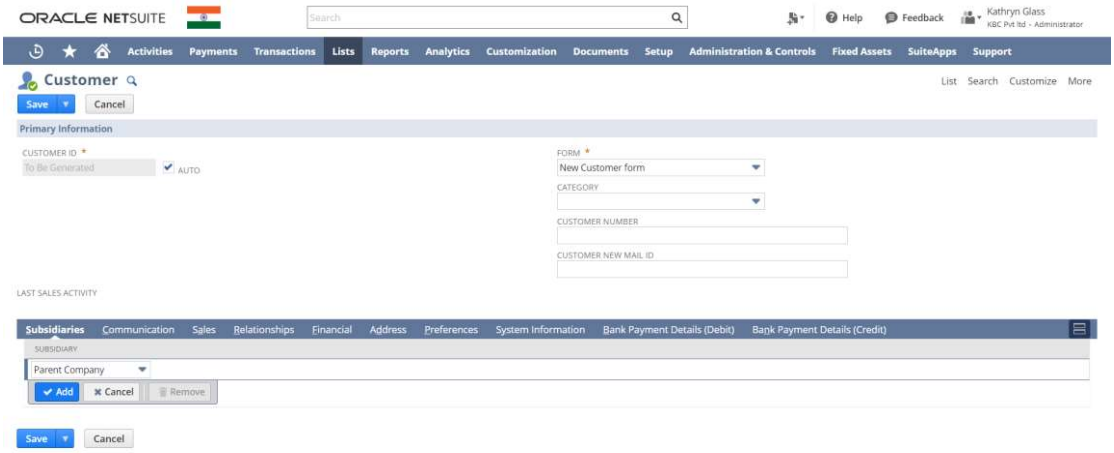
Ans. Transaction > Relationships > Customer > New customer > Select form name as a “New Customer form > Customize form > Field > Main > Find Phone and Email field > Change its label > Save



Q.7. What is the use of 'Move Elements Between Sub list' on the form? Observe what you can do with this button functionality.

Ans.

- Using Move Elements Between Subtabs, we can move any sub list or field to the preferred subtab.
- For example, Transaction > Relationships > Customer > New customer > Select form name as a "New Customer form > Customize form > click on "Move Elements Between Sub list"
- We have Category, Customer number, Customer Email Id in Primary Information



- Main > Select Category, Customer number, Customer Email Id > Select "" in Select and Set subtab > Apply > Save

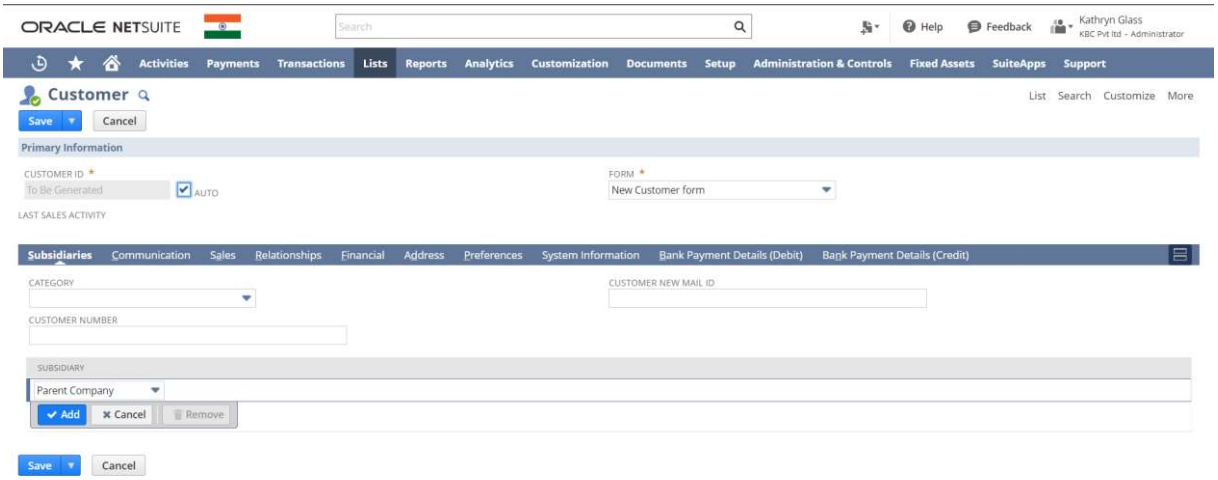
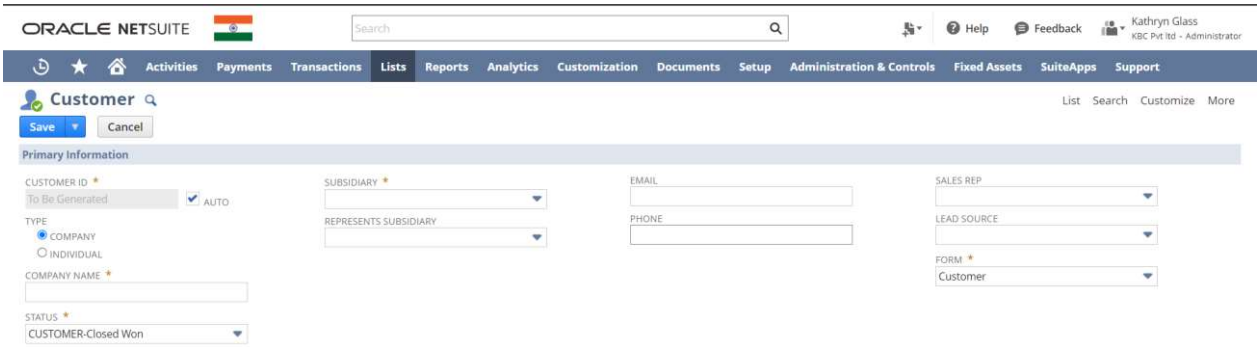
- Now we can see selected filed get move from primary information field group to Subsidiaries subtab, in this way “Move Elements Between Sub list” option can be use.



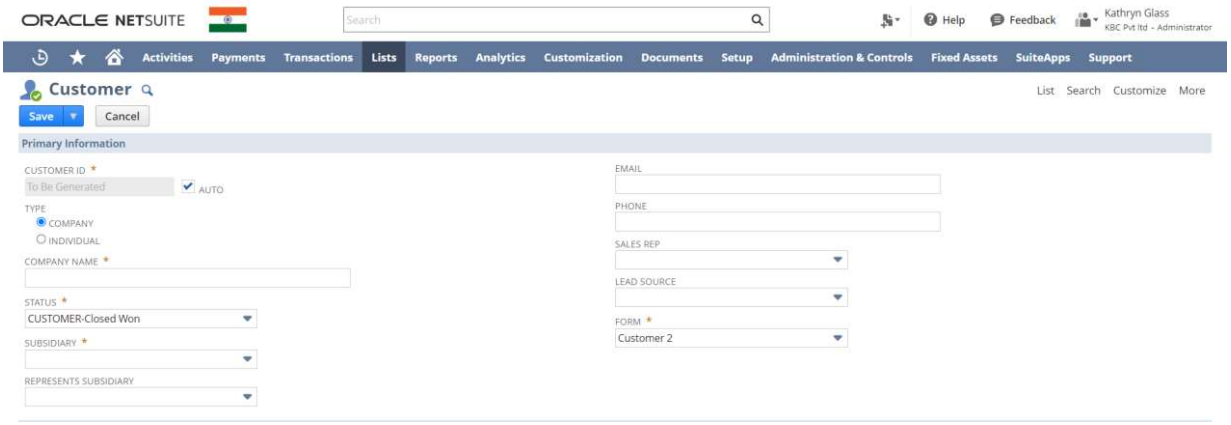
Q.8. What is the use of column break on the form? Explain.

Ans.

- The Column Break is used to insert a field to the new column
- For Example, List > Relationship > Customer > Customize form > Filed > Main > Check box of column break > save
- Previous layout of customer form



- Using line break two column layout has been created in customer form

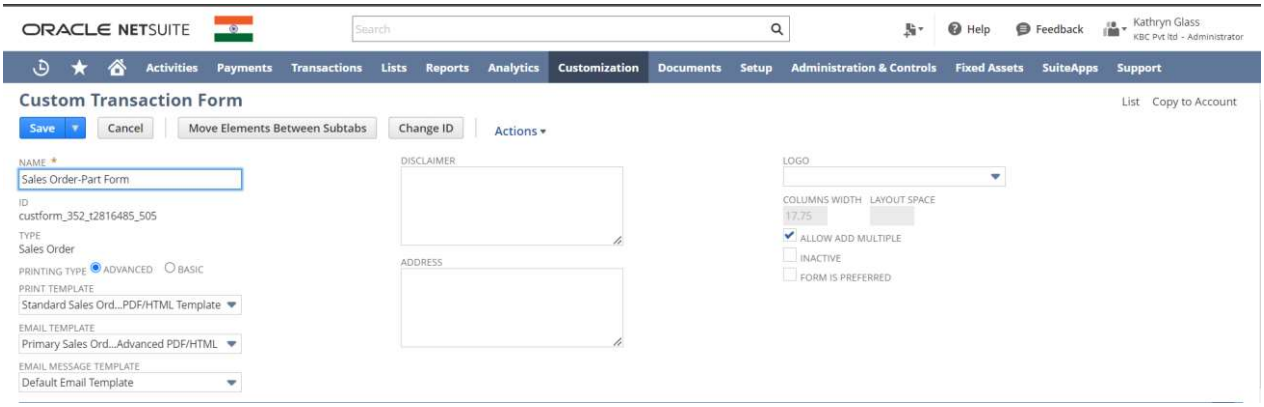


Q.9. Create one Custom 'Sales Order' form:

- Named as 'Sales Order-Part Form'
- Set print template to 'Standard Sales Order PDF/HTML Template'
- Set Email Template to 'Primary Sales Order Advance PDF/HTML'

Ans.

- Transaction > Sales > Enter sales order > Customize > Customize form > Enter Name as 'Sales Order-Part Form' > Select print template 'Standard Sales Order PDF/HTML Template' > Select Email template 'Primary Sales Order Advance PDF/HTML' > Save



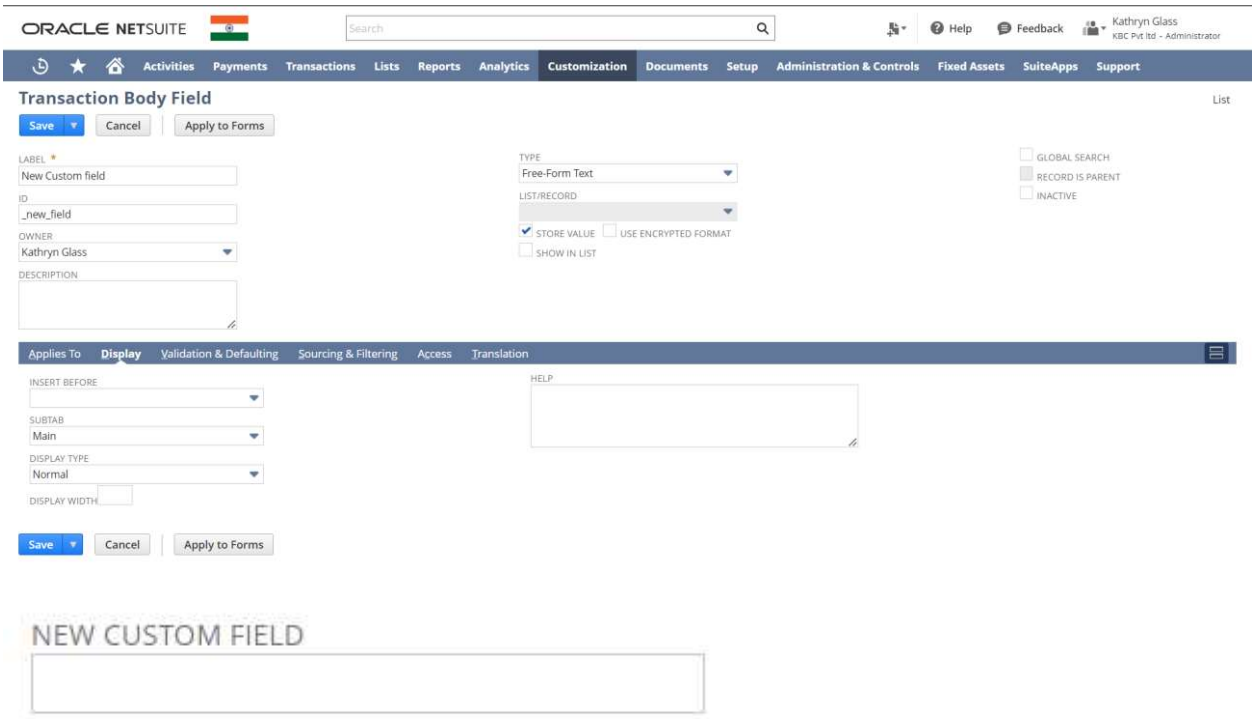
Q.10. What is Display type:

- Normal
- Inline Text
- Disabled

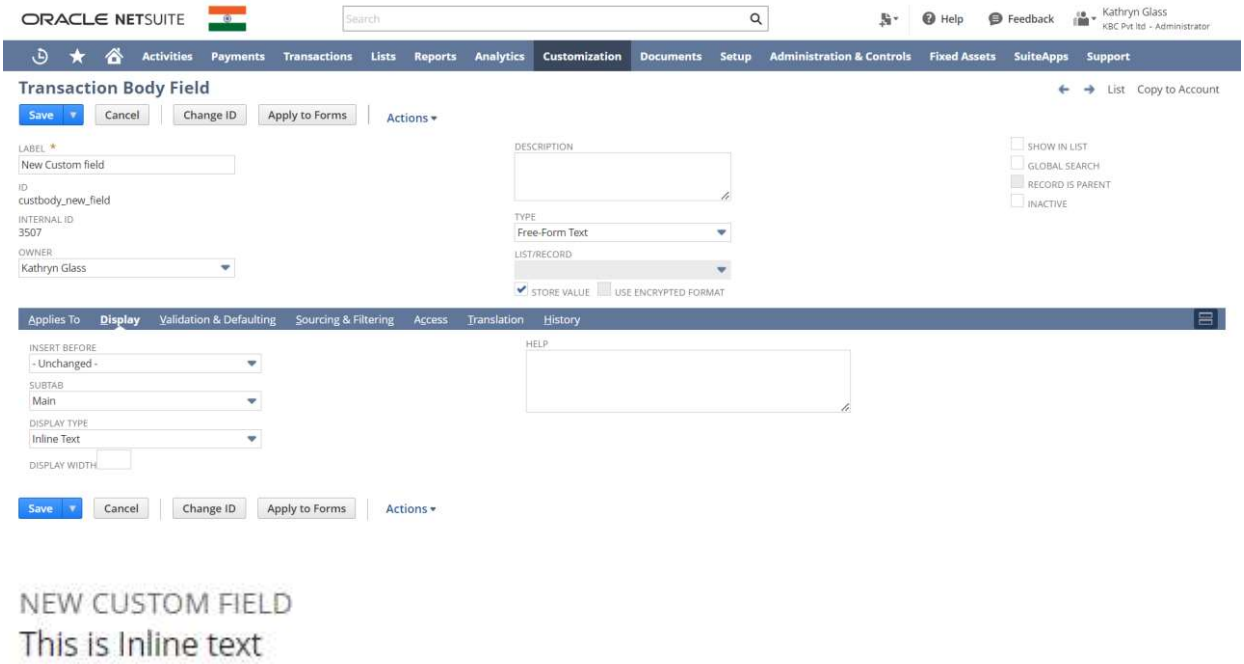
Make the changes on the form fields and observe the changes

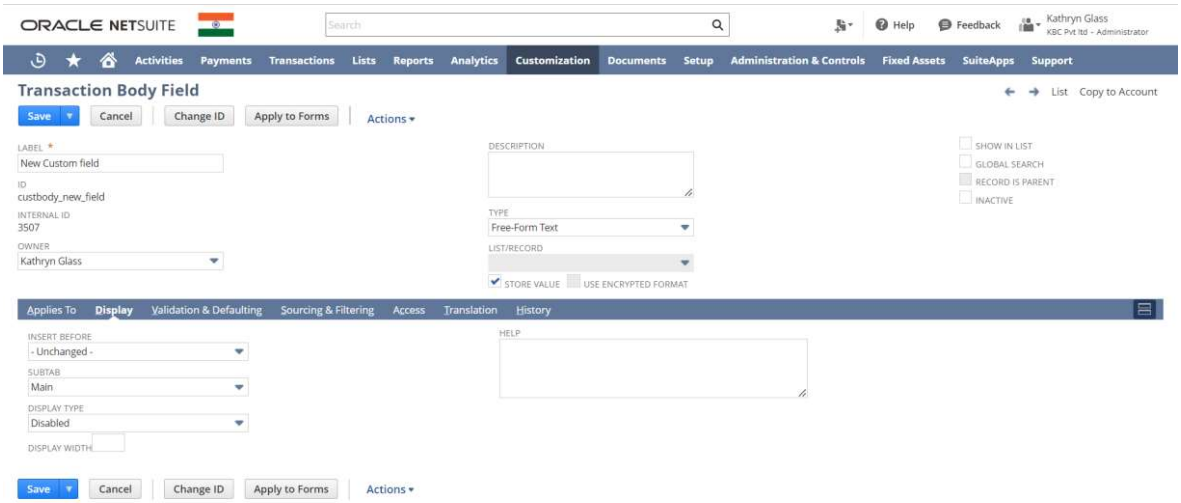
Ans.

- Display types let us specify how our custom fields behavior in NetSuite.
- We can use display types to make fields only for informational purposes and not have them stored in account. We can also create fields that are not editable or that have default information or custom code calculations.
- For Example: Transaction > Sales > Enter sales order > Customize > Customize form > Screen fields > Main > New filed > Select Display type > save
- Display type: Normal



- Display type: Inline text, in this filed we must put default value





- Display type: Disabled
